

Philipp Hilbert. *Senior Product Manager, AR Automation & Fintech Platforms.*

Positioning, B2B payments veteran with 13 years of product ownership who turns complex financial workflows into scalable, AI-native platform experiences that move money faster.

Dear Versapay Team,

AR is one of those domains where the problem is obvious, the pain is acute, and the solutions are almost always under-engineered, which is why Versapay's positioning as the platform that removes friction between finance teams, customers, and business systems caught my attention. I have spent the last decade building products in exactly the adjacent spaces: P2P payments at Kvitt (taken from zero to acquisition by Sparkasse inside the girocard ecosystem), B2B SaaS platforms for insurers and reinsurers at EMIL Group, data platform product ownership at Germany's Federal Employment Agency, and AI/data platform delivery for the FCAS defence programme at Rohde & Schwarz. The connective tissue across all of it is the same: complex financial and operational workflows, regulated environments, cross-functional teams, and the discipline of defining what "done" actually means in measurable terms before a line of code is written.

What draws me specifically to this role is the AI-first mandate. I do not treat AI as a feature to be added; I use it daily as a product execution tool. Claude Code, GitHub Copilot, Cursor, and Lovable are part of how I run discovery, generate edge cases, prototype concepts, and accelerate spec work. At Rohde & Schwarz I redirected platform strategy based on instrumented workflow analysis, two competing designs, one recorded zero clicks, and drove a 200% increase in pipeline runs by prioritising what users actually did over what they said they wanted. That same discipline applies directly to AR automation: the workflows are measurable, the drop-off points are findable, and the experiments are designable.

On the commercial side, I have owned product economics before. At EMIL Group I restructured an 18-person delivery organisation that was losing engineers and client trust, shipped the Claims Center from concept to production with no prior template, and cut new insurance product time-to-market from months to under a week. At Bundesagentur für Arbeit I reduced data-update time by 75% through ETL modernisation while simultaneously running a full UI relaunch, not by heroics, but by sequencing and ruthless scope discipline. I understand that ownership means the outcome metric, not just the feature shipped.

My fintech and payments background adds specific weight here. Kvitt was a mobile group-based P2P payment product built inside the girocard ecosystem; I took it from zero to acquisition. I have designed payment flow and PSP integration products, worked on the edge cases that make or break user trust in payment systems, and understand both the technical constraints and the compliance considerations that come with moving money. Versapay's B2B payments platform, and the challenge of accelerating cash flow at scale across 5M+ transacting companies, is a natural extension of that work, not a pivot.

I operate well in ambiguous, fast-moving environments, I hold decisions accountable to metrics, and I keep the ego out of the room. If that matches what you are looking for in your AR Automation team, I would be glad to talk.

Best regards, *Philipp Hilbert*
