

Philipp Hilbert. *Product Manager, Applied AI & eGRC.*

Positioning, Senior PM with 13 years in regulated enterprise environments, now specialising in AI-native product delivery for technically complex, mission-critical systems.

§ WHY ANSEN

Ansen sits at a genuinely interesting intersection: AI-enabled products built for environments that cannot tolerate ambiguity, government customers, air-gapped networks, audit trails that actually matter. The job description names LLM workflows, RAG, agents, and human-in-the-loop controls as first-class product concerns alongside on-premises and constrained-network deployment constraints, that combination is rare, and it is exactly where careful product thinking pays off most. The eGRC angle is particularly concrete: compliance workflows, evidence collection, and regulatory reporting are domains where a weak requirements process causes real downstream harm, not just a missed sprint. *That is precisely the environment where my tendency to instrument everything before declaring success compounds.*

§ HONEST FRAMING

I have not shipped a dedicated eGRC product, risk and control management, third-party risk, and regulatory reporting as a standalone product category are adjacent rather than native territory for me. What I bring instead is direct experience turning compliance constraints and audit requirements into product architecture at Bundesagentur für Arbeit (as Deputy IT Security Officer), at Bundesdruckerei, and at Qcrypt AG, where security, identity, and auditability were core product properties rather than afterthoughts.

§ AI-NATIVE STACK

Daily tools, not buzzwords.

- **Claude Code**, in-repo prototyping and spec generation
- **GitHub Copilot**, pair-programming across Python and SQL
- **Cursor**, context-aware refactoring and codebase navigation
- **Lovable**, rapid front-end prototyping for user-testing
- **n8n**, agentic workflow orchestration
- **GPT**, requirements drafting and edge-case enumeration
- **Figma**, workflow diagrams and acceptance-criteria mockups
- **Gamma.app**, stakeholder-ready concept decks

§ TECHNICAL ENVIRONMENT

Shipped with, not just listed.

Python, SQL, PostgreSQL, MongoDB, REST APIs, Kubernetes, OpenShift, Docker, ArgoCD, Helm, GitOps, Jenkins, CI/CD, Azure DevOps, Git, GitLab, Kafka, Dagster, dbt, Django, Kotlin (Spring Boot), Figma, Jira, Confluence, Miro.

§ SIDE PROJECT

CONSTRUCT8 [GITHUB.COM/HILBERTP](https://github.com/HilbertP) →

Two-sided B2B staffing marketplace built zero-to-one, operating on WhatsApp and Telegram with LLM agents across the full funnel.

- Anonymity-until-payment model protects both sides until commitment is made, removing the intermediary headhunter cost.
- LLM agent layer handles intake, matching, and follow-up so a single operator runs day-to-day operations.
- Funnel and conversion analysis instrumented in SQL from day one; decision on feature priority is data-driven not gut-driven.
- Demonstrates exactly the discovery-to-production arc Ansen describes: prototype, validate, harden, operate.

§ HOW I WOULD WORK AT ANSEN

First weeks, concrete.

WEEK 1

Listen, map, find the gaps.

Shadow at least two FDE customer sessions, map existing AI-enabled workflows end-to-end, and identify where requirements hand-offs between discovery and engineering are currently losing fidelity.

WEEK 2

Instrument and slice.

Define measurable acceptance criteria for the top three open roadmap items and flag any that lack a human-in-the-loop checkpoint or an evaluation loop.

WEEK 3+

Ship, close loops.

Drive the first pilot item through rollout readiness, documentation, stakeholder communication, adoption metrics baseline, and feed the first field-feedback cycle back into the roadmap.

I COVER LETTER

Dear Ansen Hiring Team,

Ansen's product brief reads like a job description written for the gap I have been filling across the last five years: technically fluent Product Management at the seam between AI-enabled workflows and environments where security, auditability, and constrained deployment are non-negotiable requirements rather than late-stage concerns. I would like to make the case that I am the right person to own this roadmap.

At Rohde & Schwarz I led Product Management for the internal AI and data platform supporting the FCAS European defence programme, a multinational, security-sensitive environment with strict data handling requirements, no tolerance for outages, and a cross-functional team of more than fifteen engineers and data scientists. I instrumented two competing product directions, killed the one with zero adoption, and redirected strategy toward developer-code-first workflows that increased pipeline runs by 200%. The lesson I took from that project: in technically complex, regulated environments, the product manager's primary value is translating ambiguous operational reality into clear, testable requirements, and having

the discipline to measure before declaring success. That is the core of what Ansen's FDE pod description is asking for.

At Bundesagentur für Arbeit I held the role of Deputy IT Security Officer alongside product responsibilities, which gave me direct exposure to audit logging, data classification, access control, and the operational reality of running analytics products inside a highly regulated public-sector environment. I introduced Dagster and dbt to eliminate manual ETL hand-holding, cutting data update time by roughly 75%, and I carried a full containerisation migration and UI relaunch through the same period without disrupting quarterly reporting cycles. The combination of data platform ownership and security awareness in a regulated environment maps directly onto the eGRC and sensitive-environment dimensions Ansen describes.

On the applied AI side, I design and prototype with Python, SQL, notebooks, and Figma daily. I have shipped LLM agent workflows in my own startup (construct8) where agents handle intake, matching, and follow-up across a two-sided marketplace, and I treat evaluation loops, feedback mechanisms, and human-in-the-loop controls as first-class product requirements rather than engineering details. I am also the co-founder of Qcrypt AG, a quantum-resistant encryption company, where I owned the entire product architecture for a hardware-plus-software security product sold into enterprise buyers, including the installation constraint that drove us to a three-layer design that deploys in under two minutes. Security as a product property rather than a compliance checkbox is a perspective I carry into every role.

The gap I want to name honestly is dedicated eGRC product experience, I have not owned a standalone risk-and-control or regulatory reporting product. What I do bring is deep familiarity with the operational workflows that eGRC products serve: compliance evidence gathering, audit readiness, policy enforcement, and regulated data environments, experienced from the product and security-officer side at Bundesagentur für Arbeit and Bundesdruckerei. I learn adjacent domains quickly by spending time with users before touching the roadmap, and the transferable mechanics, structured requirements engineering, evaluation criteria, release planning, and adoption metrics, are fully in place.

I would welcome the opportunity to discuss how my background fits the FDE pod's current priorities. I am based in Berlin, available at four weeks' notice, and open to travel or relocation where the role requires it.

Best regards, *Philipp Hilbert*

§ BEARING

Product Manager with 13 years of product ownership in regulated industries, defence AI, public-sector analytics, healthcare, insurance, security, and fintech. I specialise in translating ambiguous operational problems into structured requirements, measurable acceptance criteria, and prioritised roadmaps, then leading cross-functional engineering teams through pilot, production hardening, and adoption. My technical fluency spans AI-enabled workflows, data platform ownership, Python, SQL, and security-sensitive deployment environments; I prototype to validate before I commit to build.

§ WHAT I CAN DO

AI Products and Tooling: LLM agents, agentic workflows, prompt and context engineering, evaluation loops, human-in-the-loop design, AI governance, EU AI Act, Explainable AI (XAI); prototyping with Claude Code, GitHub Copilot, Cursor, Lovable.

Product Management: continuous discovery, product vision, product roadmap, prioritisation, MVP definition, PoC, A/B testing, user research, prototyping, release planning, go-to-market support.

Product Ownership: requirements engineering, user stories, acceptance criteria, definition of done, backlog refinement, sprint planning, velocity and burndown, Jira, Confluence, Figma, Miro.

Analytics and Data: ETL, Dagster, dbt, PostgreSQL, SQL, funnel and churn analysis, KPI definition, Matomo, MicroStrategy.

Technical Environments Owned: Python, SQL, Kubernetes, OpenShift, Docker, ArgoCD, GitOps, CI/CD, Jenkins, Git, Azure DevOps, REST APIs, Kafka, Django, Kotlin.

Agile and Scaled Delivery: Scrum, Kanban, SAgile, ART, PI planning, SDLC, regression and end-to-end test automation, release gating.

Governance and Security: GDPR, Deputy IT Security Officer, identity management, audit logging, data classification, access control, regulated data environments.

Stakeholder and Leadership: cross-functional team leadership, C-level reporting, workshop facilitation, conflict resolution, change management.

§ PROFESSIONAL EXPERIENCE

ROHDE & SCHWARZ · PRODUCT MANAGER · DEFENCE AI & DATA PLATFORM 2024-2025

Owned roadmap and delivery for the FCAS AI and data platform across 15+ engineers and data scientists. GitOps rollout with ArgoCD cut deployment time from days to 30 minutes; workflow instrumentation redirected strategy to developer-code-first, raising pipeline runs 200%.

BUNDESAGENTUR FÜR ARBEIT · PRODUCT MANAGER · PUBLIC SECTOR ANALYTICS 2023-2024

Deputy IT Security Officer. Introduced Dagster and dbt, cutting ETL update time by 75%; migrated bare-metal to containerised environments; carried a full UI relaunch through the same period without disrupting regulated reporting cycles.

CLINET PLATFORMS · PRODUCT OWNER · HEALTHCARE MOBILE 2023-2023

Cut an undeliverable roadmap to the top 10% against agreed success measures: user acceptance rose fivefold. Integrated CGM/KIS interface, reducing anamnesis time from 30 minutes to 5.

EMIL GROUP · PRODUCT MANAGER · INSURANCE B2B SAAS 2022-2022

Restructured an 18-person delivery org into three lean teams with leads; attrition fell from near-total exodus to one departure. Shipped the Claims Center from concept to production and cut new-product time-to-market from months to under a week.

SCHEIDT & BACHMANN · PRODUCT OWNER INTEGRATION · RETAIL & PAYMENTS 2021-2022

Moved research results into production in a fully SAFe environment with agile release trains and PI planning across a matrix organisation.

BUNDESDRUCKEREI · PRODUCT OWNER (INTERIM) · GOVERNMENT DATA PLATFORM 2021-2021

Data structures and identity management for Robert Koch Institute programmes DIM and DESH; regulated, security-sensitive environment.

AOK ITSCARE · PRODUCT OWNER (PROXY) · HEALTH INSURANCE 2019-2020

Migrated legacy procurement system to Shopware for three AOK insurers and roughly 20,000 employees; backlog refinement, user stories, and acceptance criteria in Jira.

ENERCON · PROJECT LEAD · ENERGY & INFRASTRUCTURE 2019-2019

Full site IT modernisation end to end for a wind-energy operator.

WALDBURG-ZEIL KLINIKEN · PRODUCT OWNER · HEALTHCARE 2017-2018

Wifi infrastructure rollout across nine hospitals in a clinical network.

§ FOUNDER & EARLY-STAGE EXPERIENCE

CONSTRUCT8 · FOUNDER AND PRODUCT MANAGER · CONSTRUCTION
STAFFING 2025-2026

Zero-to-one B2B marketplace with LLM agents across the funnel; SQL-instrumented funnel and conversion analysis; anonymity-until-payment model protecting both sides until commitment.

QCRYPT AG · CO-FOUNDER AND PRODUCT OWNER · QUANTUM-SECURE
ENCRYPTION 2016-2021

Owned product architecture for hardware-plus-software quantum-resistant encryption; three-layer design achieving sub-two-minute enterprise installation. Later Chair of the Board.

SMART SOIL TECHNOLOGIES · CO-FOUNDER, CDO AND CFO · AGRI-TECH
2018-2021

Laboratory to investor rounds; financial planning and investor reporting for a nanotechnology fertiliser product.

KVITT PAYMENT SOLUTIONS · FOUNDER AND CFO · FINTECH PAYMENTS
2013-2018

Mobile group-based P2P payments; built from zero and acquired by Sparkasse, operating inside the girocard ecosystem.
