Dear emaratech Hiring Team,

I am writing to apply for the Product Manager position. With thirteen years of product ownership across defence AI, public-sector analytics, healthcare, insurance, and fintech, always in environments where client requirements had to be translated precisely into delivery, I believe I can step into this role and add value from the first sprint.

Your posting describes a PM who interfaces directly with clients, documents business requirements, manages the backlog against strategic priorities, and owns quality through UAT. That is an accurate description of what I have done at every engagement. At Rohde & Schwarz, I managed a cross-functional team of 15+ engineers and data scientists for an internal AI and data platform, running Scrum ceremonies in Jira and Confluence while maintaining alignment with multinational stakeholders across the FCAS European programme. At Bundesagentur für Arbeit, I served as Deputy IT Security Officer alongside my product role, which meant I also carried compliance and procedural responsibility of exactly the kind your posting requires. At CLINET Platforms, I cut a five-person team's roadmap to the top 10% of features against agreed success criteria and increased user acceptance fivefold, a clear example of backlog prioritisation driving outcome over output.

The conflict resolution and stakeholder alignment aspects of this role are areas where I have had to operate under pressure. At EMIL Group, the delivery organisation was losing senior engineers and client trust simultaneously. I restructured 18 people into three lean teams with dedicated leads: attrition dropped from near-total exodus to a single departure. Rebuilding client confidence while restructuring internally required exactly the kind of dual-track engagement management your posting describes, resolving internal priority conflicts while maintaining external-facing communication and delivery commitments.

On the requirements side, I am comfortable with the full cycle from initial client workshops through Business Requirements Documents, user stories, acceptance criteria, and traceability matrices. I have maintained requirements traceability in both Jira and custom documentation systems, and I understand that a requirements matrix is not a bureaucratic artefact but the instrument by which you check at the end whether what was built matches what was asked. That discipline is non-negotiable in client-delivery environments.

I hold a Diplom-Wirtschaftsingenieur from TU Berlin, which satisfies the Computer Sciences and Engineering academic requirement. I am an EU citizen, fluent in English at C2 level, and fully open to relocating to Dubai for an on-site role. I can be available within four weeks of an offer.

I would welcome the opportunity to discuss how my background maps to your current client engagements and pipeline.

Best regards, *Philipp Hilbert*
