

Philipp Hilbert. *Senior Product Manager, FinTech & AI Platforms.*

Positioning, thirteen years owning regulated digital products, from a fintech acquisition to a defence-grade AI platform, distilled into one role.

Dear Hiring Team,

I am writing to apply for the Product Manager position on Antal International's FinTech and AI Platforms search for a leading Abu Dhabi government-affiliated entity. The brief, translating government policy, regulatory requirements, and market needs into secure, scalable, compliant digital products, describes the shape of work I have been doing for thirteen years across fintech, defence AI, public-sector analytics, and regulated insurance platforms.

My closest match to the core of this role is the Payments and FinTech track. I founded Kvitt Payment Solutions, a mobile group-based P2P Payments product, built it from zero, and took it to acquisition: it was acquired by Sparkasse and operated inside the girocard ecosystem. That experience taught me what it means to ship a financial product inside a regulated infrastructure, where every design decision is also a compliance decision and where institutional partners need to trust the product before they will let it touch real money. I then spent five years as Co-Founder and Product Owner of Qcrypt AG, an IT security company delivering quantum-secure encryption to enterprise buyers, another domain where regulatory acceptance and security audit readiness are as much a product deliverable as the feature itself.

At the enterprise and government end of the spectrum, I led the AI and data Platform product at Rohde & Schwarz for the FCAS European defence programme, managing fifteen-plus engineers and data scientists across multinational teams. I introduced GitOps delivery with ArgoCD that cut rollout time from days to thirty minutes, and I redirected the entire product strategy after instrumented user-workflow analysis showed that a beautifully designed UI was recording exactly zero clicks. At the Bundesagentur für Arbeit I was Product Manager for the national labour-market analytics platform, where I also held the role of Deputy IT Security Officer. I migrated a bare-metal system into containers, introduced Dagster and dbt to reduce data-update cycle time by seventy-five percent, and managed a full UI relaunch alongside an ETL migration, all within the governance constraints of a federal public-sector environment.

Across all of these roles the pattern has been the same: complex, multi-stakeholder products where the PM is the bridge between policy or strategy at the top and engineers, data scientists, compliance teams, and external vendors at the delivery layer. I am comfortable presenting to senior leadership and equally comfortable sitting with an engineering team to debug a release dependency. I have held budget responsibility as CFO and board chair, which means I bring a commercial lens to roadmap trade-offs as well as a delivery one.

Abu Dhabi is not a hypothetical relocation for me: it is a target I have been actively pursuing. I am ready to relocate and work fully on-site, and I see the GCC's ambition in fintech and digital government platforms as one of the most interesting product environments in the world right now. I would welcome the opportunity to discuss how my background fits the specific platforms and stakeholder landscape you are building.

Best regards, *Philipp Hilbert*
