

Philipp Hilbert. *Product Owner for mobile app delivery.*

Positioning, nearly ten years of hands-on product ownership, translating complex workflows into shipped software across regulated, cross-functional environments.

§ WHY CONSTAFF / THIS ENGAGEMENT

A 12-month engagement building iOS and Android apps for an enterprise client in Köln is exactly the kind of structured, outcomes-oriented mandate I work best in: clear scope, a cross-functional team, and a real user base to deliver for. The posting explicitly names bridging user needs, business goals, and technical constraints from idea to release – which maps directly to the work I have done across healthcare mobile, InsurTech SaaS, and defence AI platforms. The requirement to communicate complex dependencies clearly to heterogeneous stakeholders is one I have had to earn under pressure, not just practise. *That is the kind of role where deliberate stakeholder craft compounds quickly.*

§ AI-NATIVE STACK

Daily tools, not buzzwords.

- **Claude**, requirements drafting, edge-case generation, spec review
- **GitHub Copilot**, in-sprint implementation support and code review
- **Cursor / VSCode**, LLM-assisted development sessions
- **Lovable**, rapid front-end prototyping before dev handoff
- **Gamma.app**, stakeholder-facing decks and product workshops
- **n8n**, agentic workflow automation and integration design
- **GPT**, research, user story generation, backlog grooming prep

- **Framer**, interactive prototype walkthroughs for stakeholder alignment
-

§ TECHNICAL ENVIRONMENT

Shipped with, not just listed.

Mobile app delivery across iOS and Android using AngularJS and Ionic; backend integration via REST APIs and legacy hospital information systems (CGM KIS); Kotlin (Spring Boot) and Python for backend services; PostgreSQL and MongoDB for data persistence; Kubernetes for container orchestration and deployments; Jenkins and Bitbucket for CI/CD; ArgoCD and GitOps for rollout automation; Redpanda for event streaming; dbt and Dagster for data pipeline management.

§ SIDE PROJECT

CRYPTO BACKTESTING ENGINE [GITHUB.COM/HILBERTP](https://github.com/HilbertP) →

A personal backtesting and strategy-evaluation framework for crypto markets.

- Ingests historical trade and orderbook data from centralised and decentralised venues including Hyperliquid and Bitget.
 - Built on a file-queue-based agent loop architecture for modular strategy execution.
 - Covers perpetual futures mechanics: margin models, funding rates, liquidation logic, and slippage simulation.
 - Demonstrates the technical depth and self-directed execution style directly transferable to complex backlog problems on a mobile product with real infrastructure dependencies.
-

§ HOW I WOULD WORK AT CONSTAFF

First weeks, concrete.

WEEK 1

Listen, map, find the gaps.

Shadow the existing team across iOS and Android workflows, audit the current backlog for prioritisation logic and hidden dependencies, and build a first stakeholder map identifying who owns which requirement channel.

WEEK 2

Structure the backlog.

Run a structured refinement session with developers and IT analysts to surface technical blockers and dependency clusters, then reorder the backlog so the next sprint starts with the highest-leverage, least-blocked items.

WEEK 3+

Ship and close loops.

Hold weekly product workshops to realign stakeholders on release scope, drive acceptance criteria to done, and establish a lightweight rhythm of continuous delivery that keeps client trust intact through the 12-month engagement.

I COVER LETTER

Dear Julia Barth and the Constaff team,

I am writing to apply for the Product Owner AppSolutions engagement (JBA14742). With nearly ten years of hands-on product ownership across mobile healthcare, regulated B2B SaaS platforms, and cross-functional enterprise delivery, I am confident I can step into this role quickly and add value from day one.

The brief describes a product owner who bridges user needs, business goals, and technical constraints from idea to release – and who can communicate complex requirements clearly across developers, IT analysts, and business stakeholders. This is a pattern I know well. At CLINET Platforms, I owned the end-to-end delivery of a mobile-first hospital app across iOS and Android: core flows for anamnesis, meal and therapy plans, patient documents, and CGM integration. I built stakeholder trust explicitly by making technical complexity legible – legacy APIs, external database constraints, and integration risks were communicated in plain language, not buried in ticket comments. At Emil Group, I inherited a 17-person team in delivery crisis, split it into working Scrum units, re-established sprint discipline, and turned near-total senior developer attrition into a single departure over a multi-month engagement. The lever in both cases was the same: structured communication and consistent ownership of the product backlog.

On the technical side, I am fluent in the mobile and backend stack that typically underlies this kind of work. I have shipped across AngularJS/Ionic, REST API integrations, Kubernetes-based deployments, and GitOps-based rollout pipelines. I can evaluate technical dependency chains independently, which means I do not need engineers to translate every constraint before I can prioritise. That independence matters when the backlog has ten competing demands and one sprint.

I am based in Berlin and comfortable with a 70% remote arrangement, with regular travel to Köln as needed. I am available from August 2026 and hold the right to work in Germany without restriction.

I would welcome a conversation to learn more about the client context and team structure. Thank you for your consideration.

Best regards, *Philipp Hilbert*

II CURRICULUM VITAE

§ BEARING

Product Owner and Product Manager with nearly ten years of experience owning mobile and web product delivery across regulated, cross-functional environments. Background spans healthcare mobile apps, enterprise SaaS platforms, government analytics systems, and defence AI data pipelines. Strong backlog management, structured stakeholder communication, and the ability to evaluate technical dependencies independently. Comfortable in ambiguity, capable of stepping into unstable delivery situations and restoring rhythm without losing momentum.

§ CORE STRENGTHS

- Mobile product ownership across iOS and Android delivery
- Backlog ownership: prioritisation, refinement, sprint discipline
- Stakeholder alignment across business, engineering, IT analysis, and QA
- Technical fluency in mobile backends, REST APIs, and Kubernetes deployments
- Cross-functional team structuring and delivery stabilisation
- Translating complex requirements into dev-ready user stories
- Workshop facilitation and client trust building under pressure
- Agile process re-establishment in prototype-stage environments
- Autonomous feature delivery from discovery to GitOps rollout

§ PROFESSIONAL EXPERIENCE

CLINET PLATFORMS 2021, 2022

Product Owner, Mobile Healthcare App

- Delivered a mobile-first pilot app across iOS and Android for hospitals, covering digital anamnesis, meal and therapy plans, transport, chat, and patient document storage.
- Integrated CGM interface into hospital information system (KIS) workflows, managing legacy API constraints across external databases.
- Built stakeholder trust through transparent communication of technical complexity and consistent delivery of the highest-leverage features under tight deadlines.

Tech: AngularJS, Ionic, Python, Kubernetes, CGM API integration

EMIL GROUP 2022, 2022

Product Manager, InsurTech SaaS Platform

- Re-established sprint discipline and delivery stability in a 17-person team in crisis; split into smaller Scrum units and introduced ownership and deputy concepts.
- Reintroduced velocity tracking and structured refinement practices; reduced senior developer attrition from near-total to a single departure.
- Delivered Claims Center module from concept to production; ran weekly product workshops that rebuilt client trust in a prototype-stage environment.
- Designed and shipped modules across product configuration, pricing, underwriting, policy issuance, document management, and workflow automation.

Tech: Low-code platform, Java, HTML/CSS, Kubernetes, REST APIs

ROHDE & SCHWARZ 2024, 2025

Product Manager, AI Data Transformation

- Led a cross-functional team including architect, data scientists, backend and frontend engineers, and QA under government contract (FCAS programme).
- Delivered autonomous feature sets end-to-end: user stories, acceptance criteria, implementation support, testing, and GitOps-based rollout.
- Unblocked infrastructure-level issues in OpenShift independently; delivered in one week a feature that had been outstanding for over a year.

- Reduced deployment times from several days to 20–40 minutes by introducing GitOps with ArgoCD.

Tech: Kotlin (Spring Boot), Python, PostgreSQL, MongoDB, Kubernetes, Argo Workflows, ArgoCD, OpenShift

FEDERAL EMPLOYMENT AGENCY 2023, 2024

Product Manager, Public Data Analytics

- Advanced the Arbeitsmarktmonitor analytics platform: delivered labour shortage analytics, regional comparison tools, and modernised admin tooling.
- Introduced Dagster for automated ETL and indicator generation; standardised CI/CD with full test integration at build time.
- Served as Deputy IT Security Officer (IT-SV) with focus on compliance, governance, and data lineage.
- Migrated legacy systems to Kubernetes and managed major system upgrades.

Tech: Python, Django, JavaScript, PostgreSQL, dbt, Dagster, DuckDB, Kubernetes, Jenkins

§ FOUNDER & EARLY-STAGE EXPERIENCE

QCRYPT AG 2016, 2018

Product Owner

- Owned architecture and delivery of a quantum-secure encryption product based on one-time-pad keys and true random number generator hardware.
- USP: full setup in under two minutes, no technical knowledge required.
- Also served as deputy IT security officer.

KVITT PAYMENT SOLUTIONS 2013, 2018

Founder & CFO

- Founded and built a group-based P2P payment product on a P2P backbone.
- Owned PSP integration, full UX/UI design, and mobile app prototype.
- Later acquired and operated by Sparkasse.

AOK HEALTH INSURANCE – ITSCARE 2019, 2020

Proxy Product Owner

- Led migration of internal webshop to Shopware, including complex catalogue and API integration and customisable approval policy workflows.
