Dear Julia Barth and the Constaff team,

I am writing to apply for the Product Owner AppSolutions engagement (JBA14742). With nearly ten years of hands-on product ownership across mobile healthcare, regulated B2B SaaS platforms, and cross-functional enterprise delivery, I am confident I can step into this role quickly and add value from day one.

The brief describes a product owner who bridges user needs, business goals, and technical constraints from idea to release – and who can communicate complex requirements clearly across developers, IT analysts, and business stakeholders. This is a pattern I know well. At CLINET Platforms, I owned the end-to-end delivery of a mobile-first hospital app across iOS and Android: core flows for anamnesis, meal and therapy plans, patient documents, and CGM integration. I built stakeholder trust explicitly by making technical complexity legible – legacy APIs, external database constraints, and integration risks were communicated in plain language, not buried in ticket comments. At Emil Group, I inherited a 17-person team in delivery crisis, split it into working Scrum units, re-established sprint discipline, and turned near-total senior developer attrition into a single departure over a multi-month engagement. The lever in both cases was the same: structured communication and consistent ownership of the product backlog.

On the technical side, I am fluent in the mobile and backend stack that typically underlies this kind of work. I have shipped across AngularJS/Ionic, REST API integrations, Kubernetes-based deployments, and GitOps-based rollout pipelines. I can evaluate technical dependency chains independently, which means I do not need engineers to translate every constraint before I can prioritise. That independence matters when the backlog has ten competing demands and one sprint.

I am based in Berlin and comfortable with a 70% remote arrangement, with regular travel to Köln as needed. I am available from August 2026 and hold the right to work in Germany without restriction.

I would welcome a conversation to learn more about the client context and team structure.
Thank you for your consideration.

Best regards, *Philipp Hilbert*
