

Philipp Hilbert. *Product operator who turns operational complexity into shipped software.*

Positioning, ten years of end-to-end product delivery across regulated, complex, and fast-moving B2B environments – built for a proptech team scaling across Europe.

§ WHY UKIO

Ukio sits at the intersection of real estate operations and software-driven scale – a combination that demands a PM who can translate messy, multi-stakeholder workflows into clean internal tooling without losing sight of the end customer. The job description is explicit: internal products that directly improve external experience, complex business logic, and the ability to balance short-term wins against a longer strategic roadmap. That is a precise match for the work I have done across B2B SaaS platforms, public data systems, and regulated enterprise environments. The €27 million Series A and the pace of market expansion signal that the next twelve months will be about building the operational backbone, not just the customer-facing layer. *That is exactly the moment where structured delivery discipline compounds fastest.*

§ AI-NATIVE STACK

Daily tools, not buzzwords.

- **Claude Code**, in-repo spec generation and edge-case review
- **Cursor / VSCode**, LLM-assisted development and code-level product validation
- **Lovable**, rapid front-end prototyping for stakeholder alignment
- **Framer**, design-heavy wireframing and interactive prototypes
- **Gamma.app**, structured decks and stakeholder communication
- **GPT**, research, copy, and requirements drafting

- **n8n**, workflow automation and agent orchestration
 - **GitHub Copilot**, developer-side pairing and sprint support
-

§ TECHNICAL ENVIRONMENT

Shipped with, not just listed.

Python, Django, PostgreSQL, dbt, Dagster, DuckDB, JavaScript, Kotlin (Spring Boot), MongoDB, Kubernetes, ArgoCD, Helm, Argo Workflows, OpenShift, Jenkins, REST APIs, Redpanda, MicroStrategy, Bitbucket, Git, Shopware, AngularJS, Ionic, CGM API integration.

§ SIDE PROJECT

BACKTEST ENGINE & TRADING BOT FRAMEWORK [GITHUB.COM/HILBERTP](https://github.com/HilbertP)

→

Personal crypto infrastructure project: a modular backtesting engine and algorithmic trading system built from scratch.

- Implements strategy backtesting against historical OHLCV data with configurable slippage and fee models.
 - Connects to live exchange APIs for paper and live execution via a bot framework with queue-based signal handling.
 - Draws on deep practical experience across Hyperliquid, Jupiter, 1inch, and Across Protocol to inform realistic simulation assumptions.
 - Directly demonstrates the SQL fluency, data pipeline thinking, and analytical rigour Ukio is looking for in a PM who uses data to drive decisions.
-

§ HOW I WOULD WORK AT UKIO

First weeks, concrete.

WEEK 1

Listen, map, find the gaps.

Shadow every internal team that touches the booking, operations, and property management workflows – mapping the actual process against what the current tooling supports and identifying where manual workarounds signal missing product.

WEEK 2

Prioritise and slice.

Run a first backlog triage with engineering: separate the load-bearing items from the noise, define acceptance criteria for the top three, and align on a realistic delivery sequence that accounts for the squad's actual capacity.

WEEK 3+

Ship, measure, close.

Deliver the first scoped item end-to-end – user story to production – while establishing a lightweight KPI framework to measure whether internal efficiency gains are translating to better customer outcomes.

I COVER LETTER

Dear Ukio team,

Ukio's core operational challenge is one I recognise well: as a proptech company scales across cities and countries, the internal tooling that worked for a handful of apartments starts to break under the weight of real complexity – more markets, more edge cases, more stakeholders with competing priorities. The PM role you are hiring for sits right at that inflection point, and it is the kind of problem I have spent nearly ten years building the muscle to solve.

At Emil Group, I joined an InsurTech B2B SaaS platform that had lost delivery discipline under exactly this kind of pressure. The team was too large, the backlog was unmanageable, and a key client had lost confidence in the product. I split a 17-person squad into smaller, purpose-built Scrum units, reintroduced velocity tracking and structured refinement, and ran weekly product workshops that rebuilt client trust within a quarter. At Rohde & Schwarz, I owned an AI data platform end-to-end – writing user stories, supporting implementation, and managing GitOps-based rollout – while coordinating across architects, data scientists, frontend and backend engineers, and multinational government stakeholders. At the Federal Employment Agency, I served as Deputy IT Security Officer while simultaneously delivering new analytics features and migrating a legacy system to Kubernetes. In all three cases, the common thread was turning complex, multi-stakeholder environments into a steady, predictable flow of shipped product.

Your job description calls out SQL fluency and an interest in AI tooling as meaningful differentiators. Both are genuine parts of my daily practice, not resume items. I use Claude Code and Cursor to accelerate requirements work and validate implementation logic. I have designed ETL pipelines with Dagster and dbt, modelled data provenance systems, and built lightweight automations with n8n. Basic SQL is not a stretch – I use it to interrogate data directly rather

than waiting for an analyst to translate a question. For a proptech platform where pricing, availability, and booking logic all live in structured data, that matters.

I am based in Berlin, which puts me a short flight from Barcelona, Madrid, Lisbon, and Paris – and I am comfortable operating fully remote in the interim. I am an EU citizen with no visa requirements. I would be glad to walk through any of the projects above in more detail, and I look forward to hearing from you.

Best regards, *Philipp Hilbert*

II CURRICULUM VITAE

§ BEARING

Product Manager with nearly ten years of experience turning complex operational workflows into scalable software. Background spans B2B SaaS platforms, regulated public-sector analytics, AI data infrastructure, and founder-level company building. Comfortable owning product end-to-end – from discovery and stakeholder alignment through backlog management, delivery, and measurement – in environments where requirements are incomplete and speed matters. Fluent in AI-native tooling and technical enough to work directly with engineering on architecture and implementation decisions.

§ CORE STRENGTHS

- Translating complex operational workflows into prioritised, dev-ready requirements
- Backlog management, sprint discipline, and delivery ownership across small squads
- Cross-functional stakeholder alignment including business, engineering, and QA
- Data-driven prioritisation and KPI-oriented product thinking
- AI-native product execution and rapid prototyping
- Internal tooling that directly improves end-customer experience
- Product discovery under ambiguity and shifting business priorities
- Technical fluency across modern web, data, and infrastructure stacks
- Founder-level pragmatism – low ego, high agency, full ownership

§ PROFESSIONAL EXPERIENCE

ROHDE & SCHWARZ 2024, 2025

Product Manager, AI Data Transformation

- Delivered autonomous feature sets end-to-end: user stories, acceptance criteria, implementation support, testing, and GitOps-based rollout
- Reduced deployment times from several days to 20–40 minutes by introducing GitOps with ArgoCD
- Unblocked infrastructure-level issues independently; delivered in one week a feature the project lead had been requesting from engineers for over a year
- Led cross-functional team including architect, data scientists, backend and frontend engineers, and QA
- Built data provenance, audit trails, and evaluation frameworks for a multimodal AI dataset platform under government contract (FCAS)

FEDERAL EMPLOYMENT AGENCY (BUNDESAGENTUR FÜR ARBEIT) 2023, 2024

Product Manager, Public Data Analytics

- Delivered new features for the Arbeitsmarktmonitor analytics platform: labour shortage analytics, flexible regional comparison, and modernised admin tooling
- Introduced Dagster for automated ETL and indicator generation; standardised CI/CD with full test integration
- Migrated legacy systems to Kubernetes and managed major system upgrades
- Served as Deputy IT Security Officer with focus on compliance, governance, and data lineage

EMIL GROUP 2022

Product Manager, InsurTech SaaS Platform

- Designed and delivered a Claims Center module from concept to production rollout on a B2B platform serving primary insurers, reinsurers, MGAs, and brokers
- Re-established sprint discipline: split a bloated 17-person team into smaller, effective Scrum units and introduced ownership and deputy concepts
- Regained client trust in a prototype-stage environment through structured communication and weekly product workshops
- Reduced senior developer attrition from near-total to a single departure

CLINET PLATFORMS 2021, 2022

Product Owner, Mobile Healthcare App

- Delivered core patient-facing flows: digital anamnesis, meal and therapy plans, transport, chat, and document storage across iOS and Android
 - Integrated CGM interface into hospital information system workflows under tight deadlines
 - Built stakeholder trust through transparent communication of technical complexity
-

§ FOUNDER & EARLY-STAGE EXPERIENCE

QCRYPT AG 2016, 2018

Product Owner & Deputy IT Security Officer

- Owned product architecture for a quantum-secure encryption product based on one-time-pad keys and true random number generator hardware
- Designed for setup under two minutes with no technical knowledge required – usability as a core product constraint

KVITT PAYMENT SOLUTIONS 2013, 2018

Founder & CFO

- Built a group-based P2P payment product on a P2P backbone, including PSP integration, full UX/UI design, and mobile app prototype
- Product later acquired and operated by Sparkasse

AOK HEALTH INSURANCE – ITSCARE 2019, 2020

Proxy Product Owner

- Managed migration of internal webshop to Shopware, including complex catalogue and API integration and configurable approval policy workflows
-
