

Philipp Hilbert. *Integration platform builder who ships scalable standards, not one-off configs.*

Positioning, ten years of translating operational complexity into reusable product architecture – now applied to customer onboarding at scale.

§ WHY RIVERTY

Riverty sits at the intersection of fintech infrastructure and regulated complexity – exactly the space where sloppy integrations become expensive liability. The posting is explicit: the job is not customer-by-customer configuration, it is building the standardised components, templates, and data models that make each subsequent integration cheaper. That problem – turning one-off operational work into repeatable product architecture – is the throughline of my last four roles. The combination of B2B platform scale, Bertelsmann's long-term ownership horizon, and a genuine product mandate (not just delivery execution) is rare. *That is precisely the environment where patient, systems-oriented product work compounds.*

§ AI-NATIVE STACK

Daily tools, not buzzwords.

- **Claude**, requirements drafting, edge-case generation, discovery synthesis
- **GitHub Copilot**, in-repo development support and spec review
- **GPT**, stakeholder document preparation and structured analysis
- **Cursor / VSCode**, AI-assisted implementation and codebase navigation
- **Lovable**, rapid UI prototyping for internal tooling concepts
- **Gamma.app**, structured presentation of product strategy and roadmaps
- **n8n**, agentic workflow automation and integration pipeline design

- **II-Agent**, autonomous task orchestration in development workflows

§ TECHNICAL ENVIRONMENT

Shipped with, not just listed.

REST APIs, JSON/XML data models, Python, Kotlin (Spring Boot), PostgreSQL, MongoDB, Kubernetes, ArgoCD, Argo Workflows, Jenkins, Dagster, dbt, DuckDB, Django, AngularJS, Ionic, OpenShift, Helm, Terraform, GitOps pipelines, MicroStrategy, Shopware, CGM API integrations, low-code platform tooling.

§ HOW I WOULD WORK AT RIVERTY

First weeks, concrete.

WEEK 1

Listen, map, find the gaps.

Sit with integration engineers and client-facing teams to map every step from first customer contact to live-on-platform, identifying where the current process relies on individual knowledge rather than documented standards – mirroring the discovery approach I used at Emil Group to understand where delivery had accumulated invisible debt.

WEEK 2

Inventory and cluster.

Catalogue existing integration artefacts – API contracts, onboarding checklists, configuration templates, handoff documents – group them by reuse potential, and identify the two or three pain points that, if standardised, would shorten the next three integrations by the largest margin.

WEEK 3+

Ship first standard.

Draft and socialise the first reusable component or template with the Integration & Onboarding team, run it through a real or simulated client scenario, collect feedback, and close the loop – establishing the review and release rhythm the roadmap will operate on.

I COVER LETTER

Dear Riverty Hiring Team,

Product Manager Integration is, at its core, a platform standardisation role wearing a customer-onboarding label. The job description makes this explicit: the mandate is building templates, configuration solutions, shared data models, and interface standards – then ensuring the people who touch every new client actually apply them. That is a different and harder problem than running integrations one by one, and it is one I have approached systematically in several contexts.

At Emil Group, I inherited a delivery environment where every client had been handled as a special case. Sprint discipline had collapsed, a 17-person team had no shared ownership model, and client trust was deteriorating. My first move was not to deliver faster – it was to introduce structure: split the team into accountable Scrum units, reintroduce velocity tracking, and run weekly product workshops that gave clients a predictable communication rhythm. Within two months, attrition had dropped and delivery had stabilised. The mechanism was the same one Riverty needs: convert individual heroics into repeatable process.

At Rohde & Schwarz, I delivered autonomous feature sets end-to-end – user stories through GitOps rollout – on a multinational government programme with strict auditability requirements. Reducing deployment time from several days to under forty minutes was a direct result of introducing a standardised GitOps pipeline with ArgoCD rather than allowing each engineer to deploy in their own way. Standardisation here was not a process preference; it was a measurable engineering outcome.

My technical fluency is practical rather than decorative. I have worked with REST API integration in multiple contexts, including PSP integration at Kvault Payment Solutions and CGM API integration at CLINET Platforms, and I understand where integration contracts break – at data model mismatches, undocumented edge cases, and missing error handling. That means I can write requirements that engineers can implement without rework, and I can hold a technical conversation with an architect about why a proposed interface design will not scale.

On AI-native product execution: I use Claude, GitHub Copilot, and n8n as daily working tools – for requirements drafting, edge-case generation, and workflow automation respectively. This is not background knowledge; it is the way I structure discovery and reduce the time between insight and documented requirement.

I am a native German speaker with C2 English, based in Berlin, and available with four weeks' notice. I would welcome the opportunity to speak about how this role fits the next stage of Riverty's integration infrastructure.

Best regards, *Philipp Hilbert*

§ BEARING

Product Manager with nearly ten years of experience translating complex operational workflows into scalable software architecture. Background spans B2B SaaS platforms, regulated data environments, government programmes, and founder-level company building. Consistent track record of introducing product structure – standardised processes, shared ownership models, repeatable delivery patterns – in environments where bespoke handling had accumulated as technical and operational debt. Technically fluent across modern backend and data stacks; AI-native in daily execution.

§ CORE STRENGTHS

- Translating one-off operational complexity into reusable product standards
 - Cross-functional alignment without direct authority
 - Backlog management, sprint discipline, and delivery recovery
 - API and integration product design across B2B contexts
 - Discovery and prioritisation in regulated, constraint-heavy environments
 - Technical fluency: REST, data models, pipelines, Kubernetes, GitOps
 - AI-native product execution and rapid prototyping
 - Stakeholder communication across business, engineering, compliance
 - Founder-level pragmatism, low ego, sustained delivery ownership
-

§ PROFESSIONAL EXPERIENCE

EMIL GROUP 2022

Product Manager, InsurTech SaaS Platform

- Introduced standardised Scrum units, ownership models, and velocity tracking into a delivery environment where bespoke handling had caused team fragmentation and client trust erosion
- Designed and delivered a Claims Center module from concept to production rollout, defining the integration contracts and configuration patterns reused across subsequent modules
- Regained client trust through structured weekly product workshops and transparent communication of technical complexity
- Reduced senior developer attrition from near-total to a single departure by establishing clear ownership and deputy structures

- Split a bloated 17-person team into smaller, effective units; re-established sprint discipline lost under delivery pressure

Tech: Low-code platform, Java, HTML/CSS, Kubernetes, REST APIs

ROHDE & SCHWARZ 2024, 2025

Product Manager, AI Data Transformation

- Delivered autonomous feature sets end-to-end: user stories, acceptance criteria, implementation support, testing, and GitOps rollout – establishing a reproducible release pattern across a multinational programme
- Standardised deployment via ArgoCD GitOps, cutting deployment time from several days to 20–40 minutes
- Defined data transformation standards and audit trail requirements for multimodal datasets used in ML training and evaluation
- Unblocked infrastructure-level issues in OpenShift independently; delivered in one week a feature the project lead had been requesting from engineers for over a year
- Led a cross-functional team including architect, data scientists, backend and frontend engineers, and QA

Tech: Kotlin (Spring Boot), Python, PostgreSQL, MongoDB, Redpanda, Kubernetes, Argo Workflows, ArgoCD, OpenShift

FEDERAL EMPLOYMENT AGENCY (BUNDESAGENTUR FÜR ARBEIT) 2023, 2024

Product Manager, Public Data Analytics

- Defined and delivered new platform features – labour shortage analytics, flexible regional comparison, modernised admin tooling – on a live analytics platform used by regional authorities
- Introduced Dagster for automated ETL and standardised indicator generation, replacing fragile manual pipelines
- Migrated legacy systems to Kubernetes and managed major system upgrades with zero service disruption
- Served as Deputy IT Security Officer with focus on compliance, governance, and data lineage
- Standardised CI/CD with full test integration at build time

Tech: Python, Django, JavaScript, PostgreSQL, dbt, Dagster, DuckDB, MicroStrategy, Kubernetes, Jenkins

CLINET PLATFORMS 2021, 2022

Product Owner, Mobile Healthcare App

- Delivered core patient-facing flows – digital anamnesis, meal and therapy plans, transport, chat, document storage – under tight deadlines with a small team
- Integrated CGM interface into hospital information system workflows, navigating legacy API constraints and external database dependencies
- Built stakeholder trust through transparent communication of technical complexity

Tech: AngularJS, Ionic, Python, Kubernetes, CGM API integration

§ FOUNDER & EARLY-STAGE EXPERIENCE

KVITT PAYMENT SOLUTIONS 2013, 2018

Founder & CFO

- Built a group-based P2P payment product on a P2P backbone from concept to mobile app prototype
- Owned PSP integration, full UX/UI design, and payment flow architecture
- Product later acquired and operated by Sparkasse

QCRYPT AG 2016, 2018

Product Owner

- Owned product architecture for a quantum-secure encryption product based on one-time-pad keys and true random number generator hardware
- Designed the onboarding flow to require no technical knowledge and under two minutes to complete
- Also served as Deputy IT Security Officer

SMART SOIL TECHNOLOGIES 2016, 2021

Co-Founder, CDO & CFO

- Established digital tooling, ERP introduction, financial and investment planning for a deep-tech vertical farming startup
-
