Dear Hiring Team at Bybit,

I am applying for the Principal P2P Product Specialist role. My interest is specific: I founded Kvitt Payment Solutions, a mobile group-based P2P payments product that was acquired by Sparkasse and operated inside the girocard ecosystem. That experience gave me a hands-on understanding of what it actually takes to design trust between strangers transacting with real money, escrow logic, dispute escalation, fraud signal triangulation, and the UX decisions that move completion rates without opening attack surfaces.

Beyond Kvitt, I have spent the last eight years as an active participant in crypto markets, trading on Hyperliquid, Bitget, Jupiter, and Across Protocol, working with liquidation heatmaps on Coinglass and Hyblock Capital, and building my own backtesting engine and algorithmic trading frameworks. I understand P2P crypto trading not just as a product manager reading a spec, but as a user who has experienced firsthand where order flows break, where payment confirmation anxiety spikes, and where trust between counterparties is fragile. That dual perspective, product builder and power user, is directly relevant to the order completion rate, dispute rate, and liquidity metrics this role owns.

On the execution side, my recent roles have been about taking complex operational workflows and making them measurably better. At Rohde & Schwarz I increased pipeline runs 200% by instrumenting competing workflows and redirecting strategy based on what the data actually showed. At Bundesagentur für Arbeit I cut data-update time by 75% through disciplined ETL redesign. At EMIL Group I shipped the Claims Center from concept to production while rebuilding a fractured delivery organisation. Each of these required the same skill set the P2P role calls for: cross-functional alignment across engineering, compliance, and operations; data-driven prioritisation under pressure; and the ability to hold both user experience and platform safety in view simultaneously.

I work AI-natively, Claude Code, Lovable, and n8n for prototyping and agentic workflow design, and I bring Python fluency for data analysis alongside the standard PM toolkit. I am an EU citizen based in Berlin, available at four weeks' notice, and open to remote or relocation to the UAE.

I would welcome a conversation about how the P2P platform's current bottlenecks compare to what I have seen and solved elsewhere.

Best regards, *Philipp Hilbert*
