

Philipp Hilbert. *Senior Product Manager, B2B Platform.*

Positioning, ten years owning technical B2B platforms end-to-end, from seller-facing tooling to data pipelines, in regulated and high-velocity environments.

Dear Verena Schilmann,

Kaufland e-commerce is building the B2B platform infrastructure that determines whether sellers on an international marketplace grow or stall, and it is doing that inside one of Europe's most stable retail groups while deliberately keeping a start-up delivery cadence. That combination is unusual, and it is exactly the setup where a product manager with a technical background and a strong outcome-over-output discipline adds the most leverage.

My most directly relevant context is the AI and data platform I owned at Rohde & Schwarz for the FCAS European programme. The platform served highly technical users, engineers and data scientists across multinational teams, who needed reliable, fast, self-service tooling rather than a polished UI nobody would click. I instrumented two competing interaction models, discovered that the UI-first design recorded exactly zero production clicks, and redirected the entire roadmap toward a developer-code-first approach that increased pipeline runs by 200%. That is the same data-driven, seller-insight-first logic the posting describes for Selling Experience: you measure what sellers actually do, not what they say they need, and you build for the workflow that creates the most adoption.

On the MarTech and growth side, I bring the e-commerce domain anchor from the Shopware B2B procurement webshop I owned at AOK ITSCare, where I migrated three AOK insurers and roughly 20,000 employees off a legacy system and into a platform that is still in production. The operational complexity of a procurement webshop, catalogue management, buyer roles, approval flows, integration with downstream ERP systems, maps directly to the seller-facing marketing and listing tooling a marketplace platform needs to get right. I also understand the seller adoption funnel from the marketplace side: at construct8, my own two-sided B2B marketplace, I instrumented the full funnel in SQL and iterated on onboarding friction in weeks, not quarters.

I work with AI tooling daily, Claude Code, GitHub Copilot, Lovable, n8n for agentic workflows, and I treat these as a PM's leverage on speed, not as a technology to evangelise. The posting's call for someone who "explores and experiments with emerging technologies from experimentation to production" resonates: at Bundesagentur für Arbeit I introduced Dagster and dbt into a quarterly ETL cycle and cut data-update time by 75%, not because the tools were interesting but because the outcome was the only thing that mattered.

I am based in Berlin, hold EU citizenship, and am available on four weeks' notice. I would welcome a conversation about where the Selling Experience or MarTech platform has the highest unsolved friction today.

Best regards, *Philipp Hilbert*
