Dear Property Finder team,

Real estate is one of the few industries where the product decision is also a life decision. The gap between what a property portal usually is, a filtered list, and what it could be, a trusted advisor for the most expensive and emotionally loaded purchase a person makes, is exactly the kind of unsolved problem I find worth working on. Property Finder's framing in the job description makes the ambition concrete: you are building a business, not a backlog, and you expect the person in this role to carry both the commercial result and the craft.

My background fits that framing closely. Over thirteen years I have owned product lines with direct revenue accountability across insurance, fintech, healthcare, public-sector analytics and defence AI, and I have founded four companies, three of them taken to the point of first external revenue or acquisition. Kvitt Payment Solutions was acquired and operated by Sparkasse inside the girocard ecosystem. Qcrypt AG shipped a quantum-secure encryption product to enterprise buyers. construct8, my most recent venture, is a two-sided B2B marketplace I built alone from zero: anonymity-until-payment model, LLM agents across the funnel, GTM and pricing owned end to end, conversion tracked directly in SQL. That project is the most direct proof I can offer that I work the way this role description asks for.

On the commercial side I can build and defend a business model, funnel economics, unit economics, pricing, from a blank spreadsheet. At EMIL Group I took the Claims Center from concept to production with no precedent, restructured an 18-person organisation that was losing its engineers, and cut time-to-market for a new insurance product from months to under a week. At Rohde & Schwarz I instrumented two competing design approaches on the FCAS AI data platform and let the data decide: one recorded zero clicks. Pipeline runs increased 200% after redirecting the roadmap. These are not slide achievements; they are numbers I tracked and owned.

On the AI-native side: Claude Code, Cursor, Lovable, and GitHub Copilot are part of my daily workflow, not a line on a résumé. I use them to prototype before I involve design or engineering, to generate and stress-test specs, and to build internal tools that automate what would otherwise be manual overhead. The STEM background (Diplom-Wirtschaftsingenieur, TU Berlin, specialisation Logistics) means I am comfortable going deeper into the data and the infrastructure than most PMs, and I can write my own SQL rather than wait for a data analyst to queue the query.

Dubai is a genuine preference, not a relocation concession. I have targeted the UAE actively, I am an EU citizen with no visa complications in Germany, and I am ready to relocate on short notice. I would welcome the chance to go into more depth on any of the above.

Best regards, *Philipp Hilbert*
