Dear Hiring Team at Modern Campus,

Higher education is facing the same structural shift that retail and insurance faced a decade ago: the customer, today's non-traditional, stop-out, working-adult student, expects a digital experience that matches what they get everywhere else, and institutions that cannot deliver it will lose enrollment to ones that can. Modern Campus is building the operating layer that makes that shift possible. That is a meaningful problem, and a hard one.

I bring 13 years of product ownership in regulated B2B SaaS to this role. At Rohde & Schwarz I managed a cross-functional team of 15+ engineers and data scientists through Scrum, delivering an internal AI and Data platform for the FCAS European programme. I used instrumented workflow analysis to redirect the product strategy, the competing UI-led approach recorded exactly zero production clicks, and the developer-code-first pivot drove a 200% increase in pipeline runs. At the Bundesagentur für Arbeit I owned a national labour-market analytics platform, integrated Dagster and dbt to eliminate manual intervention on quarterly data updates, and cut per-update effort by nearly 75%. Both roles required translating complex operational workflows into a prioritised roadmap, agreeing KPIs upfront, and then checking whether the outcomes actually happened.

I evaluate AI and automation opportunities as part of standard discovery rather than as a separate initiative. My current side project, a two-sided construction-staffing marketplace, runs on LLM agents across the intake, qualification, and matching funnel, with one person operating the day-to-day. I have used Claude Code, GitHub Copilot, Cursor, and Lovable in production prototyping contexts, which means I can speak with engineering precisely about what AI-enabled product features are and are not ready to ship.

The higher education technology preference in the requirements is something I am acquiring rather than bringing. What I do bring is a pattern that transfers directly: regulated, multi-stakeholder SaaS where the end user (a student, a clinician, a labour-market researcher) is never the economic buyer, and where product decisions have to satisfy compliance, institutional IT, and executive sponsors simultaneously. At CLINET Platforms I cut a backlog to the top 10% of features against agreed success measures and saw user acceptance rise more than fivefold. At EMIL Group I restructured an 18-person delivery organisation into three lean teams after near-total senior-engineer attrition and shipped Claims Center from concept to production with no prior template. The mechanics transfer.

I am available at four weeks' notice and happy to discuss the role at your convenience.

Best regards, *Philipp Hilbert*
