Dear CargoX team,

I am applying for the Product Manager (CoreConnect) role. The job description describes a product that has to work in high-stakes, real-time environments where operators cannot afford a confusing interface or a missed alert. That is the category of software I have spent most of my career on.

At Rohde & Schwarz I owned the AI and data platform for the FCAS European defence programme. I ran a cross-functional team of 15+ engineers and data scientists, instrumented two competing workflows to find out which one operators actually used, and redirected the roadmap when the data showed the UI-led approach was getting zero engagement. That discipline, agree the metric first, instrument from day one, let the data make the call, is how I approach every product decision. It is exactly what the CoreConnect posting asks for when it says "dig into fleet telemetry, mission logs, and operational event data to diagnose root causes."

At the Bundesagentur für Arbeit I owned a national labour-market data platform and served as Deputy IT Security Officer. I migrated a bare-metal system into containers, introduced Dagster and dbt to eliminate manual data-update steps, and carried a full UI relaunch through the same period. The combination of infrastructure fluency and operator-facing product thinking is something I bring to every role, and it is directly applicable to a platform that translates robot and system behaviour into operator-facing features.

My logistics specialisation from TU Berlin and supply chain exposure across multiple roles means I understand how logistics teams actually work, their time pressure, their tolerance for system interruptions, and the trust they need to extend to any new tool before they rely on it. I know how to earn that trust through reliability and through interfaces that do not require training to use.

I can start on four weeks' notice and am based in Berlin with no visa requirement anywhere in the EU.

Best regards, *Philipp Hilbert*
