Dear Modon team,

Modon's AI solutions role is a direct match for the work I have been doing for the past several years: owning AI and data platform portfolios as a product manager and product owner inside large, multi-entity organisations, from a German federal agency to a multinational defence programme. I am applying because the combination of portfolio ownership, vendor governance and cross-subsidiary rollout is exactly the problem I find most interesting.

The job description asks for someone who can own the roadmap for Claude, Synthesia, Telnyx and Midjourney while also acting as project manager for rollouts across Modon Holding and ADNEC Group. I have done both at the same time. At Rohde & Schwarz I owned an AI and data platform across multinational teams and drove adoption from near-zero to a 200% increase in pipeline runs by reprioritising based on actual workflow analysis. At the Bundesagentur für Arbeit I owned the full product lifecycle for a national analytics platform, including vendor and tool governance, and served as Deputy IT Security Officer, so I understand the IT Security, Legal and DPO coordination the role requires.

AI governance is a real part of my background, not a credential. I have worked with AI governance frameworks in regulated environments, public sector, defence, healthcare, and I have shipped products under GDPR and EU AI Act constraints. I know how to translate policy requirements into tool configuration and onboarding rules that business users can actually follow.

On the vendor side, I have managed contract renewals, SLA escalations and licensing negotiations across multiple platforms. At EMIL Group I restructured a delivery organisation that was losing its senior engineers and its client trust, and recovered both within a single quarter. I am comfortable sitting between a vendor and a business unit and translating in both directions.

I use the tools in Modon's portfolio daily. Claude is my primary reasoning and drafting tool. I work with Midjourney regularly for visual assets. I have built agentic workflows with n8n and prototyped interfaces with Lovable. This means I can evaluate new AI capability from a position of real use, not just vendor briefings, which is what the role's market-tracking and recommendations work requires.

I am based in Berlin and willing to relocate to Abu Dhabi. I hold EU citizenship and need no visa sponsorship within the EU; for the UAE I am ready to proceed with whatever sponsorship Modon's standard process requires.

Best regards, *Philipp Hilbert*
