Dear Jobot team,

I have 13 years of product ownership across B2B SaaS, defence AI platforms, insurance, payments, and public-sector analytics. The Sr Product Manager role stood out because it asks for someone who can hold the full product lifecycle, from discovery and requirements engineering through to launch, while also bringing hands-on fluency in APIs, agentic AI systems, and wireframing. That combination matches how I actually work.

At EMIL Group I shipped the Claims Center from concept to production for a B2B SaaS insurance platform, while simultaneously restructuring an 18-person delivery organisation into three leaner teams. Attrition dropped from near-total to a single departure. At Rohde & Schwarz I led a cross-functional team of 15+ engineers on an internal AI and data platform, introduced GitOps delivery with ArgoCD, and cut rollout time from days to 30 minutes. Both roles required constant prioritisation trade-offs between customer experience, platform performance, and engineering capacity, exactly what your responsibilities section describes.

On the agentic AI side: I build with it, not just around it. I use Claude Code, GitHub Copilot, Cursor, and n8n daily for spec generation, workflow automation, and rapid prototyping. I have designed multi-agent orchestration patterns for my own projects and understand the product challenges that come with human-in-the-loop design, evaluation loops, and AI governance. That means I can write crisp technical requirements for your engineering team rather than handing over vague prompts.

The data-informed decision-making requirement is also a direct match. At the Bundesagentur für Arbeit I owned a national labour-market analytics platform, introduced Dagster and dbt for ETL, and reduced data update time by 75%. I define success metrics before we build and track them after. "Outcome over output" is not a slogan I use in interviews, it is how I actually run sprints.

I am fully remote, available on four weeks' notice, and ready to move fast. I would welcome a call to learn more about the specific workflows and customer segments this role targets.

Best regards, *Philipp Hilbert*
