§ PROFILE

Senior AI Product Manager and product owner with 13 years of product ownership in regulated industries. Delivered AI and data platforms for defence, public-sector analytics, insurance, healthcare, fintech and payments. Strong in machine learning product strategy, data product ownership, LLM agent design, and bridging business leaders with engineering and data science teams. Runs continuous discovery, turns strategy and technical constraints into a prioritised roadmap, and leads cross-functional teams through agile delivery (Scrum, Kanban, SAFe).

§ HOW I WORK

- I leave my ego at home. I want to drive the decision, not to have the last word.
 - On a new product I spend a little to learn before spending a lot to build. Cheap experiments make expensive decisions safe(r).
 - Outcome over output. Producing something is not the achievement; it also has to fit a market, so I agree what would count as success before we build and check afterwards whether it happened.
 - I keep the whole value chain in view, not just the backlog. Defect-to-fix time is a product metric; architects and DevOps engineers build that chain, my job is to steer it into the right lanes.
