Dear Hiring Team,

I am applying for the Senior Product Manager - B2B Payments & Digital Assets role. My background maps directly to what you are building: I co-founded Kvitt Payment Solutions, a mobile P2P payments fintech that ran inside the girocard ecosystem and was acquired and operated by Sparkasse. That role covered the full product lifecycle in a regulated fintech environment, payment flows, PSP integration, user onboarding, and the operational mechanics of moving money. I have also spent the past 13 years owning product in regulated industries, including B2B SaaS for insurance, public-sector analytics, and defence AI.

The platform you describe, business accounts, cross-border payments, corporate cards, FX, treasury, and digital-asset wallets, is a set of problems I understand at the infrastructure level, not just the feature level. I know how settlement works, why reconciliation breaks, and what it takes to build approval workflows that compliance and operations teams will actually trust. At EMIL Group I shipped the Claims Center from concept to production across an 18-person organisation and cut time-to-market for a new insurance product from months to under a week. At Rohde & Schwarz I reduced platform rollout time from days to 30 minutes through GitOps delivery. These are the same muscles a B2B payments platform build requires.

On the digital-asset side: I have 8 years of hands-on crypto experience. I actively trade and manage positions across centralised and decentralised venues, Hyperliquid, Bitget, Jupiter, 1inch, Across Protocol, across perpetual futures, spot markets, DEX aggregation, and cross-chain bridging. I study execution quality, market microstructure, liquidation dynamics, and routing. I have built my own dev-agent framework and a backtesting engine for crypto markets. My interest is in the infrastructure layer: stablecoins, custody, payments, settlement, and institutional execution. That is exactly the Web2 + Web3 combination your posting describes.

I write PRDs, user stories, and acceptance criteria as a matter of course, they are how I think through a problem, not a deliverable I produce afterwards. I have worked directly with banks, technology partners, and third-party integrators on both the payments and the data-platform side. I am comfortable in the detail with engineers and equally comfortable presenting commercial and regulatory implications to leadership.

Dubai is a location I am actively targeting. I am willing to relocate and work fully on-site, so there is no location friction here.

Best regards, *Philipp Hilbert*
