Dear Ledgebrook team,

I have spent 13 years as a product manager in regulated, data-heavy environments. Insurance is one of the domains I know best: at EMIL Group I owned the B2B SaaS platform that served insurers, reinsurers, brokers, and underwriters, shipped the Claims Center from concept to production, and cut the time to launch a new insurance product from months to under a week. That work required the same combination Ledgebrook is asking for, fluency in underwriting workflows, cross-functional stakeholder management across actuarial, finance, and engineering, and the discipline to keep a distributed agile team moving with clear epics and sprint planning in Jira.

The Underwriting Operations scope you describe, owning the product lifecycle from discovery through delivery, managing Jira story validation, partnering with engineering on technical initiatives, and building roadmaps aligned to OKRs, maps closely to what I did across several roles. At Rohde & Schwarz I led a cross-functional team of 15+ engineers and data scientists through Scrum, and at Bundesagentur für Arbeit I ran ETL migrations and a full UI relaunch in parallel while acting as Deputy IT Security Officer. I am comfortable with cloud infrastructure concepts including AWS, Terraform, ECS, and IAM, and I have shipped production systems built on Kubernetes, ArgoCD, and CI/CD pipelines, enough to translate technical blockers into plain language for business partners and vice versa.

What attracts me to this role specifically is the combination of a regulated, data-heavy domain and a team that is still building the operational foundation. I have done this before: at CLINET Platforms I took a roadmap a five-person team could not deliver, cut it to the features that moved the real success metrics, and watched user acceptance rise more than fivefold. At EMIL Group I restructured an 18-person delivery organisation that was losing its senior engineers, and attrition dropped to a single departure. These were not restructuring projects in the abstract, they were product delivery problems with a human dimension.

I work best in environments where engineering and business partners are trying to solve a hard operational problem together and need a PM who keeps both sides honest. Ledgebrook's underwriting operations work sounds like exactly that. I would be glad to talk through how my background fits.

Best regards, *Philipp Hilbert*
