Dear N26 team,

I have 13 years of product ownership in regulated industries, insurance, healthcare, public-sector data, and fintech, and I have been an active crypto and DeFi user and builder for eight years. The N26 Investments PM role sits at exactly the intersection of those two tracks: financial product complexity on one side, retail UX simplicity on the other, with compliance running through everything.

At EMIL Group I took a B2B SaaS platform for insurers and underwriters through a full delivery restructure. The team was losing senior engineers and client trust at the same time. I reorganised the delivery organisation, shipped the Claims Center from concept to production, and cut time-to-market for a new insurance product from months to under a week. That kind of work, holding regulatory requirements, stakeholder relationships, and engineering velocity together, is what the N26 Investments posting describes.

My crypto experience goes beyond user familiarity. I actively trade across centralised and decentralised venues including perpetual futures, DEX aggregation, and cross-chain bridging. I have built a backtesting engine for crypto markets and developed my own trading automation. I understand the execution mechanics, the regulatory surface, and the UX friction points that keep retail users from engaging with investment products. At N26 that means I can write requirements grounded in how these products actually behave, not just how they are described in a brief.

On the Data and analytics side: at Bundesagentur für Arbeit I owned a national labour-market analytics platform, introduced Dagster and dbt for ETL automation, and cut the time per data update by roughly 75%. I know how to use data to make product decisions rather than just to report on them.

I am based in Berlin, an EU citizen, and available in four weeks.

Best regards, *Philipp Hilbert*
