

Philipp Hilbert. *Trading PM with crypto infrastructure depth.*

Positioning, I have shipped regulated financial products end-to-end for 13 years and spent 8 years as an active crypto trader and builder across spot, perpetuals, and DeFi.

§ WHY CRYPTO.COM

Crypto.com sits at the point where retail reach and frontier markets actually meet, 80 million users trading spot and perpetuals on the same surface. Most trading products at that scale either dumb things down or leave casual users behind. The job description names that tradeoff explicitly, which tells me the team has already felt the pain. I have shipped financial products in environments where compliance, UX, and speed all pull in different directions, and I know what it costs to get the prioritisation wrong. *That is the environment where my decision-making has been tested most.*

§ AI-NATIVE STACK

Daily tools, not buzzwords.

- **Claude Code**, in-repo refactors and spec generation
- **GitHub Copilot**, pair programming across Python and SQL
- **Cursor/VSCode**, AI-assisted development environment
- **Lovable**, rapid front-end prototyping
- **Framer**, design-heavy iteration
- **GPT**, research, synthesis, edge-case generation
- **n8n**, agentic workflow automation
- **Gamma.app**, stakeholder-facing output

§ TECHNICAL ENVIRONMENT

Shipped with, not just listed.

Python, PostgreSQL, MongoDB, Kotlin (Spring Boot), REST APIs, Kubernetes, ArgoCD, Docker, GitOps, CI/CD with Jenkins and GitLab, Dagster, dbt, Jira, Confluence, Figma, Miro. Actively working with Hyperliquid, Bitget, Jupiter, 1inch, and Across Protocol as a trader and builder.

§ SIDE PROJECT

CRYPTO BACKTEST ENGINE [GITHUB.COM/HILBERTP](https://github.com/hilbertp) →

Personal algorithmic trading infrastructure built to test execution strategies across CEX and DEX venues.

- Ingests order book and trade data from centralised and decentralised venues to replay execution scenarios.
 - Built on a file-queue-based agent loop with Python and DuckDB for low-overhead backtesting without a full database stack.
 - Feeds into live trading decisions on Hyperliquid perpetuals and spot venues, informed by liquidation heatmap analysis via Coinglass and Hyblock Capital.
 - Directly relevant to the Trading PM mandate: I think about slippage, price impact, routing, and risk management as a practitioner, not from a slide deck.
-

§ HOW I WOULD WORK AT CRYPTO.COM

First weeks, concrete.

WEEK 1

Listen, map, find the gaps.

I sit in on trading sessions, pull the funnel data for spot and perpetuals, and interview three to five active traders using the app to understand where the execution experience breaks down.

WEEK 2

Instrument, then prioritise.

I map competing roadmap candidates against adoption, retention, and volume signals, and cut the list to what can move a number before the next quarter ends.

WEEK 3 +

Ship, close loops.

I take the top item through spec, QA alignment, and GTM, and set the post-launch measurement criteria before anything goes live.

I COVER LETTER

Dear Crypto.com team,

I have been trading crypto across centralized and decentralized venues for eight years, and building products in regulated financial environments for thirteen. Perpetuals on Hyperliquid, spot routing via Jupiter, cross-chain execution on Across Protocol, these are part of my daily workflow, not research background. I also build: I have a backtesting engine running on real order-book data and a dev agent framework I put together to accelerate my own shipping. I am applying because the Trading PM role at Crypto.com is one of the few where both sides of that actually matter.

The job description names a specific tension I recognise: retail clarity against power-user depth. I have made that call in financial products before. At EMIL Group I shipped the Claims Center from zero and cut time-to-market for new insurance product launches from months to under a week. At Rohde & Schwarz I redirected a platform strategy after instrumenting two competing workflows and finding that the more polished UI-led one recorded zero clicks in production. The lesson both times was the same: what users say they want and what their behaviour shows are different inputs, and the PM's job is to treat both seriously without confusing them.

I use AI tools as a part of how I work, not as a credential. Claude Code, GitHub Copilot, Cursor, and Lovable are in my daily workflow. I built my own agentic pipelines in n8n and file-queue-based agent loops in Python. At construct8 I ran the entire funnel solo using LLM agents for discovery, conversion, and SQL-based analysis. I mention this because the role explicitly requires an AI-native workflow, and I want to be specific rather than just checking the box.

On the crypto domain: I actively trade perpetuals, manage cross-chain positions, and study execution quality using Coinglass and Hyblock Capital. I have developed detailed ideas on market microstructure, slippage, routing, and risk management from first-hand use. I understand the infrastructure layer, stablecoins, custody, exchange connectivity, because I work with it. I also know how quickly the rails move in this market, and I know that the playbook has to be rebuilt as the market shifts rather than carried over from the last role.

The 80M-user scale and the explicit ownership model described in this posting are what make it interesting to me. I look forward to talking through what I would bring to the Trading roadmap.

Best regards, *Philipp Hilbert*

II CURRICULUM VITAE

§ PROFILE

Product manager and product owner with 13 years of product ownership in regulated industries including fintech, insurance, defence AI, healthcare, and public-sector analytics. I have been an active crypto trader and builder for eight years across spot, perpetuals, and DeFi. I run continuous discovery, turn strategy, user needs, and technical constraints into requirements and a prioritised roadmap, and lead cross-functional teams through agile delivery.

§ HOW I WORK

- I leave my ego at home. I want to drive the decision, not to have the last word.
 - On a new product I spend a little to learn before spending a lot to build. Cheap experiments make expensive decisions safe(r).
 - Outcome over output. Producing something is not the achievement; it also has to fit a market, so I agree what would count as success before we build and check afterwards whether it happened.
 - I keep the whole value chain in view, not just the backlog. Defect-to-fix time is a product metric; architects and DevOps engineers build that chain, my job is to steer it into the right lanes.
-

§ WORK EXPERIENCE

PRODUCT MANAGER, ROHDE & SCHWARZ, MUNICH / REMOTE |
07/2024-05/2025

Defence and aerospace. Internal AI and data platform for the FCAS European programme.

- Redirected product strategy based on user workflow analysis, increasing pipeline runs by 200% by prioritising developer-code-first over UI-led design. The polished UI-led workflow recorded zero clicks in production.
- Championed GitOps delivery and test automation with ArgoCD, reducing rollout time from days to 30 minutes for an AI and data platform across multinational teams.
- Led a cross-functional team of 15+ engineers and data scientists through Scrum in Jira and Confluence.

PRODUCT MANAGER, BUNDESAGENTUR FÜR ARBEIT, NUREMBERG /
REMOTE | 05/2023-07/2024

Public sector. National labour-market analytics platform for policymakers and researchers.

- Integrated test automation into the Jenkins pipeline; introduced Dagster and dbt so quarterly data imports ran without hand-holding, saving 75% of the time per data update.
- Migrated a bare-metal system fully into containers and carried a full UI relaunch and a large ETL migration through the same period.

PRODUCT OWNER, CLINET PLATFORMS, BERLIN | 01/2023-07/2023

Healthcare. Mobile patient app for iOS and Android, piloted in hospitals.

- Cut a roadmap the team could not deliver to the top 10% of features against agreed success measures: user acceptance rose more than fivefold.
- Implemented the CGM interface into hospital information system workflows: digital anamnesis went from 30 minutes to 5 from form to database.

PRODUCT MANAGER, EMIL GROUP, BERLIN | 04/2022-12/2022

Insurance. B2B SaaS platform for insurers, reinsurers, brokers and underwriters.

- Restructured an 18-person delivery organisation into three lean teams; attrition fell from near-total to a single departure.
- Shipped the Claims Center from concept to production with no precedent and cut time-to-market for new insurance product launches from months to under a week.

PRODUCT OWNER INTEGRATION TEAM, SCHEIDT & BACHMANN FUEL &
CONVENIENCE RETAIL, MÖNCHENGLADBACH | 09/2021-03/2022

- Retail and payments. Moved research results into production in a fully SAFe setup with agile release trains and PI planning.

PRODUCT OWNER (INTERIM), BUNDESDRUCKEREI, BERLIN |
03/2021-06/2021

- Government, secure data platform. Data structures and identity management for the Robert Koch Institute programmes.

PRODUCT OWNER (PROXY), AOK ITSCARE, FRANKFURT | 03/2019-05/2020

- Health insurance, B2B procurement platform. Migrated a legacy system to Shopware for three AOK insurers and roughly 20,000 employees; still in production.

§ FOUNDER TRACK

FOUNDER AND PRODUCT MANAGER, CONSTRUCT8, LIMASSOL | 12/2025-PRESENT

Construction staffing, two-sided B2B marketplace. Zero to one alone.

- Built the full funnel using LLM agents for discovery and conversion; ran funnel and churn analysis in SQL.

CO-FOUNDER AND PRODUCT OWNER, QCRYPT AG, BERLIN | 01/2016-12/2021

IT security. Quantum-secure encryption hardware and software.

- Shipped a three-layer product that installs in under two minutes to meet enterprise adoption requirements. Later Chair of the board.

FOUNDER AND CFO, KVITT PAYMENT SOLUTIONS, BERLIN | 02/2013-11/2018

Fintech. Mobile group-based P2P payments.

- Built from zero to acquisition: acquired and operated by Sparkasse inside the girocard ecosystem.

§ SKILLS

Crypto and Trading: spot trading, perpetuals, DEX aggregation (Jupiter, 1inch), cross-chain bridging (Across Protocol), Hyperliquid, Bitget, liquidation heatmap analysis (Coinglass, Hyblock Capital), market microstructure, slippage, price impact, routing, backtesting.

Product Management: continuous discovery, product roadmap and vision, prioritisation, MVP definition, A/B testing, user research and interviews, prototyping, go-to-market support, funnel and churn analysis, KPI definition.

Product Ownership: requirements engineering, user stories, acceptance criteria, backlog refinement, sprint planning, velocity and burndown, UAT, Jira, Confluence, Figma, Miro.

AI Products and Tooling: LLM agents, agentic workflows, prompt and context engineering, human-in-the-loop design, Claude Code, GitHub Copilot, Cursor, Lovable, n8n, Gamma.app.

Agile and Scaled Delivery: Scrum, Kanban, SAFe, ART, PI planning, GitOps rollout with ArgoCD, CI/CD, containerised environments.

Analytics and Data: Dagster, dbt, PostgreSQL, DuckDB, ETL, Matomo, MicroStrategy, SQL.

Technical Environments: Python, Kotlin (Spring Boot), REST APIs, Kubernetes, Docker, Jenkins, GitLab, Azure DevOps, MongoDB.

Governance: GDPR, Deputy IT Security Officer, identity management, EU AI Act, Explainable AI (XAI), budget ownership and financial planning.

§ EDUCATION

DIPLOM-WIRTSCHAFTSINGENIEUR (INDUSTRIAL ENGINEERING AND MANAGEMENT, EQUIVALENT TO A MASTER'S DEGREE), TECHNISCHE UNIVERSITÄT BERLIN (TU BERLIN), GERMANY | 10/2006-09/2014

- Specialisation: Logistics. Thesis with Siemens AG Energy Service on balancing-power market profitability.
