Dear Modern Campus team,

I have spent 13 years working in B2B SaaS and regulated industries, insurance, public-sector analytics, defence AI, healthcare, where the stakeholders are demanding, the workflows are complex, and the margin for vague requirements is zero. The Product Manager role at Modern Campus is a natural fit for that background: higher education is a domain where institutions run on legacy processes, compliance is non-negotiable, and the value of a well-defined roadmap is immediately visible.

The posting highlights AI-enabled product experience and analytics-driven decisions alongside full backlog ownership. At Rohde & Schwarz I owned an internal AI and Data platform for the FCAS European programme, leading a cross-functional team of 15+ engineers and data scientists. I instrumented two competing workflows to resolve a strategic disagreement about UI-led versus developer-code-first design, the data settled it in two weeks. At the Bundesagentur für Arbeit I reduced the time cost of each data update by 75% by introducing Dagster and dbt into the ETL pipeline and integrating test automation into Jenkins. Both examples are the kind of data-to-decision loop the role asks for.

On the AI side, I work with LLM agents and agentic workflows daily, not as a novelty but as a delivery tool. At construct8, my own B2B marketplace, I run LLM agents across the funnel so that one person handles what would otherwise require a small operations team. I also use Claude Code, GitHub Copilot, and Lovable to prototype and specify features faster than a traditional discovery cycle allows. Evaluating AI and automation opportunities for a SaaS product is something I can contribute to from day one.

Stakeholder alignment across business, engineering, QA, and data teams is where I spend most of my time in any role. At EMIL Group I restructured an 18-person delivery organisation into three lean teams after it was losing senior engineers and client trust, attrition dropped from near-total to a single departure. At CLINET Platforms I cut a roadmap to the top 10% of features against agreed success measures and saw user acceptance rise more than fivefold. Both situations required clear communication, willingness to make unpopular calls, and consistent follow-through on what was promised.

I would welcome a conversation about where Modern Campus is taking its product and where my background would be most useful.

Best regards, *Philipp Hilbert*
