Dear Geotab Hiring Team,

I am a product manager with thirteen years of end-to-end product ownership across B2B SaaS platforms in defence, public-sector analytics, insurance, and fintech. I am writing because the Geotab Video Platform role brings together the two things I find most energising: infrastructure-heavy data platform work where every decision has a measurable safety outcome, and a market, fleet telematics in the Gulf, that is genuinely accelerating. Dubai is a positive fit for me, not a compromise; I am actively targeting the UAE and ready to relocate on short notice.

The GVP role asks for someone who can own the full product lifecycle from customer discovery through launch and post-launch measurement, and who can do it repeatedly and at pace inside a cross-functional team. That is a precise description of how I have worked for the past decade. At Rohde & Schwarz I led the internal AI and data platform for the FCAS European defence programme: I ran customer workshops, instrumented two competing workflows, and redirected the product away from a beautiful UI no one clicked toward a developer-code-first design that people actually used. At Bundesagentur für Arbeit I owned a national labour-market analytics platform, introduced Dagster and dbt so quarterly data imports ran without hand-holding, and carried a full UI relaunch through a containerisation migration in the same cycle. Both roles required exactly the data fluency, SQL, ETL pipeline design, KPI definition, and the cross-functional stakeholder alignment that the Geotab posting describes.

On the discovery and prioritisation side: at CLINET Platforms I inherited a roadmap a three-person team could not deliver, cut it to the top ten percent of features, and watched user acceptance rise more than fivefold. At EMIL Group I restructured an eighteen-person delivery organisation into three lean teams, stopped the senior-engineer attrition, and shipped the Claims Center from concept to production, cutting time-to-market for a new insurance product from several months to under a week. These are the kinds of ruthless prioritisation and cross-functional leadership outcomes the posting is looking for, and I have them across multiple industries and team sizes.

Geotab's open platform and Marketplace model means the GVP roadmap sits at the intersection of customer-facing features, third-party integrations, and machine learning-driven safety analytics. I have shipped on all three surfaces: platform integrations at Scheidt & Bachmann (SAFe, agile release trains, POS and forecourt systems), ML-adjacent data products at Rohde & Schwarz and Bundesagentur für Arbeit, and B2B SaaS user stories and epics throughout. I am also comfortable with SQL and analytics tooling in production, not just in concept.

I would be glad to walk through any of these projects in detail and to discuss how the GVP roadmap looks from the outside. Thank you for your time and consideration.

Best regards, *Philipp Hilbert*
