

Philipp Hilbert. *Integration product manager who builds for scale, not for once.*

Positioning, ten years of platform PM experience shipping standardised, configuration-driven integration products in regulated environments – directly applicable to Riverty's client onboarding mission.

§ WHY RIVERTY

Riverty's integration challenge is a genuinely hard platform problem: every new client brings edge-case requirements, and without standardised components the integration cost compounds indefinitely. The job description is explicit that the goal is not just faster onboarding but reusable, configuration-driven architecture – which is exactly the product thinking I applied at Emil Group and Rohde & Schwarz. What makes this role worth pursuing is that it sits at the intersection of platform thinking, cross-functional coordination, and process design, inside a FinTech that operates at real scale across eleven countries. *That is the kind of environment where systematic, low-ego product work creates durable leverage.*

§ HONEST FRAMING

My direct experience is in InsurTech and government-sector regulated platforms, not in consumer debt or collections specifically. The underlying mechanics – complex B2B onboarding, configurable workflow engines, compliance-aware data models, and cross-team standardisation – are identical to what I have shipped professionally.

§ AI-NATIVE STACK

Daily tools, not buzzwords.

- **Claude Code**, in-repo refactors and spec generation
 - **GPT**, discovery synthesis and requirements drafting
 - **GitHub Copilot**, implementation support
 - **Lovable**, rapid front-end prototyping
 - **Framer**, design-heavy wireframes and stakeholder demos
 - **Gamma.app**, structured product decks
 - **n8n**, agentic workflow automation
 - **Cursor / VSCode**, LLM-assisted development environment
-

§ TECHNICAL ENVIRONMENT

Shipped with, not just listed.

Kotlin (Spring Boot), Python, Django, JavaScript, AngularJS, PostgreSQL, MongoDB, REST APIs, Dagster, dbt, DuckDB, Kubernetes, ArgoCD, Argo Workflows, Helm, OpenShift, Jenkins, Bitbucket, Git, Redpanda, MicroStrategy, CGM API integration, Shopware, Ionic.

§ HOW I WOULD WORK AT RIVERTY

First weeks, concrete.

WEEK 1

Listen, map, find the gaps.

Shadow integration runs with the Operations and Tech teams, map the current client onboarding flow end-to-end in writing, and identify where manual steps and per-client workarounds are eating capacity.

WEEK 2

Scope the standard.

Conduct short discovery sessions with customer-facing teams and internal stakeholders to surface which integration requirements recur most – and draft an initial proposal for which of those can be covered by a configurable template or shared component.

Ship, document, close loops.

Own the first concrete standardisation increment through refinement, delivery, and adoption – with a clear success metric tied to integration cycle time or manual-step reduction – and establish a lightweight review cadence to keep standards current.

I COVER LETTER

Dear Riverty team,

I am applying for the Product Manager Integration role because the problem you are describing – making client onboarding to a complex platform fast, repeatable, and scalable – is the kind of systems challenge I find most rewarding to work on. Over the past ten years I have spent significant time turning one-off, manually intensive integration processes into standardised, configuration-driven products. That pattern fits what you are building.

At Emil Group I joined a B2B InsurTech platform where every new insurance product was being integrated as a bespoke project, with no shared components and no consistent interface standards between modules. I rebuilt the sprint structure, split an oversized team into focused delivery units, and worked with engineering to define reusable document management, workflow automation, and policy configuration components – directly reducing the time-to-market for new insurance products. The discipline of translating fachliche requirements into platform-level abstractions, rather than per-customer workarounds, is exactly what your job description calls "Drive Standardization."

At Rohde & Schwarz I owned a central data management platform for a multinational defence programme, where I was responsible for ensuring that data ingestion, transformation, and audit pipelines met both ML engineering and regulatory requirements. I delivered end-to-end: user stories, acceptance criteria, implementation support, and GitOps rollout. I also unblocked a long-standing infrastructure problem in OpenShift independently, delivering in one week what engineers had been unable to ship for over a year. That is the kind of ownership I bring to integration work – I do not stop at requirements.

I am fluent in the cross-functional dynamics this role requires. At the Federal Employment Agency I served as deputy IT security officer while simultaneously managing a data analytics platform across engineering, data science, compliance, and regional government stakeholders. At CLINET Platforms I held client trust together on a mobile healthcare pilot where external API instability was a constant risk, through transparent communication and structured stakeholder workshops. Aligning teams who have different incentives and different vocabularies is something I do by default, not as a special effort.

My German is native, my English is C2, and I work daily with AI-native tooling – not as a curiosity but as a core part of how I run discovery, write requirements, and accelerate prototyping. I bring that into standardisation work too: structured templates, reusable documentation formats, and lightweight tooling to make it easier for customer-facing teams to apply standards consistently.

I would be glad to speak with you about how my background fits the role.

Best regards, *Philipp Hilbert*

II CURRICULUM VITAE

§ BEARING

Product Manager with nearly ten years of experience building and scaling integration-heavy platforms in regulated, cross-functional environments. Strongest in translating complex operational workflows into standardised, configuration-driven product architecture – with a track record of reducing manual effort, establishing shared interface standards, and shipping end-to-end in ambiguous, multi-stakeholder settings. Prior roles span B2B InsurTech SaaS, public-sector data platforms, and a European defence AI programme. Equally comfortable in refinement rooms and stakeholder workshops. AI-native working style across the full product lifecycle.

§ CORE STRENGTHS

- Translating fachliche requirements into reusable platform components
- Cross-functional alignment without direct authority
- Standardisation of interfaces, data models, and integration processes
- Backlog management and sprint discipline under delivery pressure
- Product discovery: internal and external customer needs, business potential, prioritisation
- End-to-end feature ownership from story to GitOps rollout
- KPI-oriented product thinking and success metric definition
- Workshop facilitation, structured communication, stakeholder trust
- AI-native product execution and rapid prototyping

§ PROFESSIONAL EXPERIENCE

EMIL GROUP 2022

Product Manager, InsurTech SaaS Platform

- Designed and standardised modules across product configuration, pricing, underwriting, policy issuance, document management, and workflow automation – reducing insurance product time-to-market from over one year to under one week
- Delivered a Claims Center module from concept to production rollout, establishing reusable component patterns adopted across the platform
- Re-established sprint discipline and delivery stability; restructured a 17-person team into focused Scrum units with defined ownership and deputy roles
- Reintroduced velocity tracking and structured refinement to restore predictable delivery cadence
- Regained client trust in a prototype-stage environment through structured communication and weekly product workshops
- Reduced senior developer attrition from near-total to a single departure

Tech: Low-code platform, Java, HTML/CSS, Kubernetes, REST APIs

ROHDE & SCHWARZ 2024, 2025

Product Manager, AI Data Transformation

- Owned product vision and roadmap for a central AI and data management platform (FCAS European defence programme) across multimodal datasets
- Delivered autonomous feature sets end-to-end: user stories, acceptance criteria, implementation support, testing, GitOps rollout
- Reduced deployment times from several days to 20–40 minutes by introducing ArgoCD-based GitOps
- Unblocked a long-standing OpenShift infrastructure issue independently – delivered in one week what had been requested from engineering for over a year
- Led cross-functional team across architect, data scientists, backend and frontend engineers, and QA with multinational stakeholders
- Established data provenance, audit trails, and transparency standards for ML training pipelines

Tech: Kotlin (Spring Boot), Python, PostgreSQL, MongoDB, Redpanda, Kubernetes, Argo Workflows, ArgoCD, OpenShift

FEDERAL EMPLOYMENT AGENCY (BUNDESAGENTUR FÜR ARBEIT) 2023, 2024

Product Manager, Public Data Analytics

- Advanced the Arbeitsmarktmonitor analytics platform, delivering labour shortage analytics, flexible regional comparison tooling, and modernised admin workflows
- Introduced Dagster for automated ETL and standardised indicator generation pipelines
- Served as Deputy IT Security Officer with responsibility for compliance, governance, and data lineage
- Managed migration of legacy systems to Kubernetes and standardised CI/CD with full test integration

Tech: Python, Django, JavaScript, PostgreSQL, dbt, Dagster, DuckDB, MicroStrategy, Kubernetes, Jenkins, Bitbucket, Git

CLINET PLATFORMS 2021, 2022

Product Owner, Mobile Healthcare App

- Delivered core patient-facing flows: digital anamnesis, meal and therapy plans, transport, chat, document storage
- Integrated CGM interface into hospital information system workflows under strict API constraints
- Built and maintained stakeholder trust through transparent communication of technical complexity across legacy systems

Tech: AngularJS, Ionic, Python, Kubernetes, CGM API integration

§ FOUNDER & EARLY-STAGE EXPERIENCE

QCRYPT AG 2016, 2018

Product Owner & Deputy IT Security Officer

- Owned product architecture for quantum-secure encryption product (OTP / true-RNG hardware); designed for setup under two minutes with no technical knowledge required
- Served as deputy IT security officer, responsible for attack vector mitigation and compliance posture

KVITT PAYMENT SOLUTIONS 2013, 2018

Founder & CFO

- Founded and built a group-based P2P payments product on a P2P backbone, including PSP integration, full UX/UI design, and mobile app prototype; later acquired and operated by Sparkasse

AOK HEALTH INSURANCE – ITSCARE 2019, 2020

Proxy Product Owner

- Migrated internal procurement webshop to Shopware, including complex catalogue and API integration and configurable approval policy workflows
