

Philipp Hilbert. *Platform PM who ships self-serve and makes complex products feel obvious.*

Positioning, ten years owning B2B SaaS platforms end-to-end, from admin config to integrations to agentic workflows, now applied to the console that puts 1mind's Superhumans in the hands of customers.

§ WHY 1MIND

1mind is solving a real coordination failure in GTM: the moment a human hands off to another human is the moment a buyer loses trust, and you are building the infrastructure to collapse those seams. The posting's specific call-out, "reduce the time and effort required to get a new account to a successful live deployment, and identify which manual moments should become real product experiences", is precisely the kind of discovery-to-shipping loop I have run at EMIL Group, CLINET, and Bundesagentur für Arbeit. The idea of an AI assistant that understands intent and acts on the customer's behalf inside your own console is a product bet I find genuinely compelling. *That is exactly the environment where moving fast and thinking in systems compounds.*

§ HONEST FRAMING

My direct exposure to voice-AI or conversational agent products is as a builder and user rather than as a PM who has shipped a production voice pipeline. The transferable mechanic I am strong in is agentic workflow design and the configuration-model thinking underneath it, which is what the Console role is actually asking for.

§ AI-NATIVE STACK

Daily tools, not buzzwords.

- **Claude Code**, in-repo refactors and spec generation
 - **Lovable**, rapid front-end prototyping
 - **Cursor / VSCode**, assisted implementation
 - **GitHub Copilot**, inline code completion
 - **n8n**, agentic workflow design and automation
 - **Framer**, design-heavy interface prototyping
 - **GPT**, edge-case generation and research
 - **Gamma.app**, stakeholder decks and discovery briefs
-

§ TECHNICAL ENVIRONMENT

Shipped with, not just listed.

Python, Kotlin (Spring Boot), PostgreSQL, MongoDB, REST APIs, Kubernetes, ArgoCD, GitOps, Docker, Jenkins, GitLab, Azure DevOps, Dagster, dbt, Kafka, Shopware, Django, across defence AI, public-sector analytics, insurance SaaS, healthcare mobile, and fintech payment platforms.

§ SIDE PROJECT

LIBERATION OF [BAJOR GITHUB.COM/HILBERTP](https://github.com/HilbertP) →

A multi-agent coding framework built solo to automate development pipelines.

- Implements a file-queue-based agent loop where autonomous agents pick up tasks, execute code, and hand off results without human intervention between steps.
- Architecture separates task ingestion, agent execution, and result validation into discrete stages so individual components can be swapped or scaled.
- Used in production to drive construction of phoenix882.com (crypto backtesting engine) and Hyperion (aFRR balancing-market pipeline).
- Directly relevant: building an agent that can understand intent and take action on behalf of a user inside a console is the same class of problem at a different abstraction level.

§ HOW I WOULD WORK AT 1MIND

First weeks, concrete.

WEEK 1

Listen, map, find the gaps.

Shadow three to five live customer onboarding sessions and one customer success call, map the current Console information architecture against what customers actually try to do, and write up where the first-time flow breaks down, a single prioritised friction list I can share with design and engineering by end of week.

WEEK 2

Slice the onboarding.

Pick the single highest-friction moment from the audit, likely the first integration authorization or the first Superhuman configuration, prototype one alternative flow in Lovable, and run two quick usability sessions to validate whether the change reduces confusion before touching production.

WEEK 3 +

Ship and close loops.

Move the winning prototype into a proper spec with acceptance criteria, pair with engineering to scope the reusable capability underneath it (permissions model, configuration API, or integration state machine as needed), and get the first improvement live, then repeat the discovery cycle on the next friction point.

I COVER LETTER

Dear 1mind team,

The Console role caught my attention because it is rare: a product brief that is simultaneously about information architecture, integration plumbing, permissions models, and an AI assistant that takes action on a customer's behalf, all in one scope. That is not a role for someone who wants to sit in one lane. I have spent the last decade moving between those lanes, and I would like to explain why I think that background maps onto what you need.

At CLINET Platforms I took over a three-person team facing a roadmap it could not deliver. I cut it to the top ten percent of features, user acceptance rose more than fivefold. The discipline there was not ruthlessness; it was constant re-anchoring to the real problem rather than the

stated request. The equivalent at 1mind is the brief to "separate one-off requests from the broader product problems worth solving" in partnership with Customer Success. I know how that conversation goes, and I know how to run it without making CS feel bypassed.

At EMIL Group I joined an 18-person delivery organisation that was haemorrhaging senior engineers and client trust simultaneously. I restructured it into three lean teams with their own leads, attrition collapsed to a single departure, and I shipped the Claims Center from concept to production, cutting time-to-market for a new insurance product from many months to under a week. The structural work and the shipping work were not separate phases; they ran in parallel because the team could not afford to pause. I expect the same at 1mind: the Console needs to become more intuitive while the company is still growing fast, not after it has stabilised.

At Bundesagentur für Arbeit I owned a platform that spanned a Jenkins CI pipeline, ETL orchestration with Dagster and dbt, a UI relaunch, and a container migration, all concurrently, while serving as Deputy IT Security Officer. The integration-ownership and permissions-model thinking the Console role calls for is not new territory for me. I am comfortable sitting at the boundary between the UI a customer sees and the configuration model that makes it possible, and I can hold that conversation with an engineer in a way that produces a durable solution rather than a one-screen fix.

On the AI assistant dimension: I have built multi-agent frameworks and agentic workflow tooling for my own projects, and I use AI prototyping tools, Claude Code, Lovable, Cursor, as my daily working environment, not as an experiment. I understand the trust and transparency problems that arise when an assistant takes action on a user's behalf, and I have thought carefully about how to make those actions legible. That is the right starting point for defining what the 1mind Console assistant can and cannot do.

I am based in Berlin and available to work fully remotely in the Eastern timezone overlap, which I do routinely with US-based counterparts.

Best regards, *Philipp Hilbert*

II CURRICULUM VITAE

§ BEARING

Product manager with thirteen years of end-to-end platform ownership in regulated, high-complexity B2B environments. I am strongest in the space between what a customer is trying to configure and the system model underneath it, integrations, permissions, data flows, state

management, and I have a consistent record of making complex products faster to adopt and easier to operate. I build with AI tooling daily, think in systems, and ship.

§ WHAT I CAN DO

AI Products and Tooling: LLM agents, agentic workflows, prompt and context engineering, evaluation loops, human-in-the-loop design, AI governance, EU AI Act, Explainable AI; Claude Code, GitHub Copilot, Cursor, Lovable.

Product Management: continuous discovery, product vision and roadmap, prioritisation, MVP definition, PoC, A/B testing, user research and interviews, prototyping, product lifecycle management, go-to-market support.

Product Ownership: requirements engineering, user stories, acceptance criteria, definition of done, epics, backlog refinement, sprint planning, UAT, Jira, Confluence, Figma, Miro.

Technical Environments Owned: Kubernetes, ArgoCD, GitOps, Docker, Jenkins, GitLab, Azure DevOps, REST APIs, Python, Kotlin, Django, PostgreSQL, MongoDB, Kafka.

Analytics and Data: ETL, Dagster, dbt, PostgreSQL, KPI definition, Matomo, MicroStrategy.

Agile and Scaled Delivery: Scrum, Kanban, SAgile, ART, PI planning.

Stakeholder and Leadership: cross-functional team leadership, C-level reporting, workshop facilitation, conflict resolution, change management.

Governance and Business: GDPR, Deputy IT Security Officer, identity management, budget ownership, ROI reasoning.

§ PROFESSIONAL EXPERIENCE

ROHDE & SCHWARZ · PRODUCT MANAGER · DEFENCE AI PLATFORM 2024 TO 2025

Introduced GitOps with ArgoCD across a multinational team; rollout time fell from days to 30 minutes and the platform became hotfix-capable. Redirected the product from a UI-led design to developer-code-first after zero-click instrumentation in customer workshops.

BUNDESAGENTUR FÜR ARBEIT · PRODUCT MANAGER · PUBLIC SECTOR ANALYTICS 2023 TO 2024

Integrated test automation into Jenkins, introduced Dagster and dbt for quarterly imports, migrated a bare-metal system fully into containers, and carried a full UI relaunch through the same period. Deputy IT Security Officer.

CLINET PLATFORMS · PRODUCT OWNER · HEALTHCARE MOBILE 2023

Cut the roadmap to the top 10% of features; user acceptance rose more than fivefold.
Implemented the CGM/KIS interface myself: digital anamnesis fell from 30 minutes to 5.

EMIL GROUP · PRODUCT MANAGER · INSURANCE B2B SAAS 2022

Restructured an 18-person delivery organisation into three lean teams; attrition fell to a single departure. Shipped the Claims Center from concept to production, cutting time-to-market for a new insurance product to under a week.

SCHEIDT & BACHMANN · PRODUCT OWNER INTEGRATION · RETAIL AND PAYMENTS 2021 TO 2022

Moved research into production across a matrix organisation in a full SAFe setup with agile release trains and PI planning.

BUNDESDRUCKEREI · INTERIM PRODUCT OWNER · SECURE GOVERNMENT DATA 2021

Data structures and identity management for the Robert Koch Institute programmes DIM and DESH.

AOK ITSCARE · PROXY PRODUCT OWNER · HEALTH INSURANCE B2B 2019 TO 2020

Migrated a legacy procurement system to Shopware for three AOK insurers and roughly 20,000 employees; still in production.

ENERCON · PROJECT LEAD · WIND ENERGY IT 2019

Full site IT modernisation end to end.

WALDBURG-ZEIL KLINIKEN · PRODUCT OWNER · CLINICAL NETWORK 2017 TO 2018

WLAN rollout across nine hospitals.

§ FOUNDER & EARLY-STAGE EXPERIENCE

CONSTRUCT8 · FOUNDER AND PM · CONSTRUCTION STAFFING MARKETPLACE 2025 TO 2026

Zero to one alone: anonymity-until-payment model, WhatsApp and Telegram as the product surface, LLM agents across the funnel so one person runs the day-to-day.

QCRYPT AG · CO-FOUNDER AND PRODUCT OWNER · QUANTUM-SECURE
ENCRYPTION 2016 TO 2021

Shipped a three-layer product that installs in under two minutes. Later Chair of the board.

KVITT PAYMENT SOLUTIONS · FOUNDER AND CFO · FINTECH P2P
PAYMENTS 2013 TO 2018

Built from zero to acquisition; acquired and operated by Sparkasse inside the girocard ecosystem.
