Dear Hiring Team,

I am applying for the Technical Product Owner position at Emirates Group IT. The role sits at exactly the intersection where I have spent the last several years: large-scale SAFe delivery organisations, technically complex backlogs with real non-functional requirements, and the expectation that a product owner does not just write stories but takes accountability for the full lifecycle, roadmap through instrumentation.

My most directly relevant engagement was at Scheidt & Bachmann Fuel & Convenience Retail, where I embedded into a fully SAFe setup with agile release trains and PI planning, moving research outcomes across a matrix organisation into production. Before that, at the Bundesagentur für Arbeit, I owned a national labour-market analytics platform for policymakers and researchers: I introduced Dagster and dbt to eliminate hand-held quarterly imports, integrated test automation into the Jenkins pipeline to recover QA hours, and served as Deputy IT Security Officer, which gave me a close view of how governance and delivery interact at federal scale. Both experiences taught me that the bottleneck in large programmes is rarely effort; it is clarity at the story level and honest prioritisation of technical debt before it becomes an incident.

At Rohde & Schwarz, working on an internal AI and data platform for the FCAS European defence programme, I introduced GitOps delivery with ArgoCD across a multinational team of architects, data scientists, and engineers. Rollout time fell from days to 30 minutes and the platform became hotfix-capable. I also pushed my way into customer workshops, instrumented two competing workflows, and redirected the product when click data showed the elegant UI option recording exactly zero engagement. That is the kind of empirical discipline the Emirates posting asks for when it talks about defining metrics, measuring success, and proposing further iterations within available capacity.

What draws me to Emirates specifically is the scale: 50+ teams means the decisions I make about acceptance criteria quality, dependency flagging, and backlog integrity have an outsized downstream effect. I find that motivating rather than daunting, the leverage is real in both directions, which sharpens the work. I am relocating to Dubai and am comfortable with full on-site engagement from day one.

I would welcome the opportunity to discuss how my background maps to your current programme priorities.

Best regards, *Philipp Hilbert*
