

Philipp Hilbert. *Senior Product Manager, delivery experience at regional scale.*

Positioning, thirteen years of end-to-end product ownership in regulated, operationally complex environments, now applied to Amazon's last-mile delivery experience across MENAT.

Dear Amazon DEX Hiring Team,

I am applying for the Senior Product Manager role on the MENAT DEX team because it combines the two things I find most demanding and most interesting in product work: genuine P&L accountability and cross-functional delivery inside a complex operational system. The MENAT region adds a third dimension, regional nuance that cannot simply be imported from a Western e-commerce playbook.

My most directly transferable engagement was at Rohde & Schwarz, where I owned the AI and data platform for the FCAS European defence programme. That programme had a multi-national team, a stakeholder landscape spanning engineers, data scientists and executive sponsors across countries, and a delivery pipeline that was failing: rollouts took days and could not carry a hotfix. I introduced GitOps with ArgoCD, reduced rollout time from days to thirty minutes, and made the platform hotfix-capable. More importantly, I pushed my way into the customer workshops, instrumented two competing workflows, found that the UI-led option recorded exactly zero clicks in production, and redirected the product accordingly. That sequence, data over assumption, outcome over effort, is how I approach every product decision.

At Bundesagentur für Arbeit I owned a national labour-market analytics platform for policymakers and researchers, where I served as Deputy IT Security Officer alongside the product role. I migrated the system from bare metal into containers, introduced Dagster and dbt to eliminate manual quarterly imports, and carried a full UI relaunch through the same period. The ability to hold a strategic vision and an operational delivery queue simultaneously is not something I learned in a course; it is the only mode I have operated in.

Earlier, at EMIL Group, I inherited an 18-person delivery organisation that was losing its senior engineers and its client trust. I restructured it into three lean teams with their own leads, reduced attrition from a near-total exodus to a single departure, and shipped the Claims Center from concept to production, cutting time-to-market for a new insurance product from many months to under a week. The DEX role description asks for someone who can influence cross-functionally and drive outcomes for senior leadership; that restructuring required exactly that, under real pressure.

My logistics specialisation at TU Berlin and a B2B e-commerce implementation at AOK ITSCare (Shopware, three insurers, roughly 20,000 employees, still in production) give me enough grounding in the supply-and-delivery domain to ramp quickly. I am ready to relocate to Dubai or Abu Dhabi and work fully on-site, so the MENAT posting is a positive fit rather than a location compromise.

Best regards, *Philipp Hilbert*
