Dear Bybit team,

I want to lead the P2P product at Bybit because I have spent 13 years at the exact intersection this role sits on: marketplace trust mechanics and payment flows. Kvitt Payment Solutions, which I co-founded and built from zero, was a mobile P2P group payments product that ran inside the girocard ecosystem and was acquired by Sparkasse. Building that product meant solving the same problems Bybit's P2P team works on daily: matching, escrow, dispute resolution, and user protection when two strangers settle a trade. I understand why order completion rate and dispute rate are the metrics that matter, because I built the instrumentation to track them.

On the crypto side, I trade actively across Hyperliquid, Bitget, Jupiter, and 1inch, perpetuals, spot, DEX aggregation, and cross-chain flows. I study execution quality, liquidation heatmaps, and market microstructure with tools like Coinglass and Hyblock Capital. I am not a passive observer of this market. I understand the mechanics that make a P2P crypto trade succeed or fail from the user's side.

At Rohde & Schwarz I managed a cross-functional team of 15 engineers and data scientists and instrumented two competing product workflows to redirect strategy, a 200% increase in pipeline runs came from dropping the workflow nobody used. At Bundesagentur für Arbeit I owned a national analytics platform end to end, including a full ETL migration and a UI relaunch in parallel. At CLINET I cut a five-person team's roadmap to the top 10% of features and watched user acceptance rise more than fivefold. Each of these was a different domain, but the underlying move was the same: find the drop-off, confirm it with data, cut what doesn't matter, and ship the thing that does.

The P2P product lead role at Bybit asks for exactly that combination, marketplace mechanics, payment flow design, data-driven optimisation, and cross-functional execution. I am ready to own the order completion rate and dispute rate targets and drive them with the same rigour I brought to each product I have owned.

I would welcome a conversation.

Best regards, *Philipp Hilbert*
