

Philipp Hilbert. *Lead Product Manager, AI-powered enterprise search.*

Positioning, 13 years owning regulated-industry products end to end, with hands-on AI tooling and enterprise search experience that maps directly to Hyland's platform direction.

Dear Hyland team,

Hyland's products sit in the part of the enterprise stack where a wrong result has real consequences. Healthcare providers, insurers, and government agencies rely on the kind of content intelligence Hyland is building to make decisions that affect people directly. That context matters to how I think about AI product management, reliability and explainability are not nice-to-haves, they are table stakes.

My 13 years of product ownership span several of the regulated industries Hyland serves. At the Bundesagentur für Arbeit I owned a national labour-market analytics platform, introduced Dagster and dbt to replace manual ETL steps, and served as Deputy IT Security Officer, a role that put compliance and data governance at the centre of every product decision. At Rohde & Schwarz I led the AI and data platform for the FCAS European defence programme, working with a cross-functional team of 15 engineers and data scientists, and redirecting strategy based on instrumented workflow analysis that showed the UI-led approach was getting exactly zero usage.

The retrieval, enrichment, and agent-based workflow requirements in this posting map closely to work I have done. I have designed agentic workflows using n8n and LLM agents, set up evaluation and feedback loops for AI outputs, and built discovery processes around the distinction between what users ask for and what they actually do. I approach AI product evaluation the same way I approached the FCAS pipeline: instrument both paths, let usage data settle the argument.

On the go-to-market side, I have worked alongside sales and solution engineering teams on demos, release narratives, and customer-facing content, most directly at EMIL Group, where I shipped the Claims Center and cut time-to-market for a new insurance product from months to under a week. I understand that the product voice needs to be consistent across engineering sprints, customer pilots, and sales conversations, not just inside the roadmap document.

I would bring to Hyland a product practice built on direct customer discovery, technical depth across the AI and data stack, and a track record in regulated environments where getting the requirements wrong is expensive.

Best regards, *Philipp Hilbert*
