Dear ThriveCart team,

I've been building and owning payment products for most of my career. My company Kvitt Payment Solutions was a mobile P2P fintech that ran inside the girocard ecosystem and was eventually acquired and operated by Sparkasse. That meant I had to understand gateway integration, settlement flows, chargeback handling, and the regulatory constraints that come with operating inside a card network, not as a user of someone else's product, but as the person responsible for the whole stack.

More recently at Scheidt & Bachmann, I owned the integration team for POS and forecourt payment systems in a SAFe environment, moving research results into production across a matrix organisation. I've also worked on the B2B SaaS side: at EMIL Group I shipped the Claims Center from concept to production and cut time-to-market for new insurance products from months to under a week, restructuring an 18-person delivery organisation in the process.

The ThriveCart posting calls out gateway integrations with Stripe, PayPal, and Authorize.net, local payment methods, PSD2 and SCA compliance, and a data-driven approach to conversion. These are things I have hands-on experience with, and the combination of checkout-side conversion work and back-end reconciliation and treasury is the kind of full-stack payments ownership I'm looking for. I also build with AI tools daily, Claude Code, n8n, GitHub Copilot, so the requirement for experience building AI agents is a natural fit rather than something I need to learn.

What draws me to ThriveCart specifically is the scale of the problem: a SaaS platform with a large creator and merchant base, where payment reliability and conversion rate improvements have a direct and measurable effect on user revenue. That's a product surface where instrumentation, tight feedback loops, and careful prioritisation actually move the needle.

I'd welcome the chance to talk through how my background maps to what you're building.

Best regards, *Philipp Hilbert*
