Dear Avenga team,

I am applying for the Senior Product Owner role. My background is 13 years of end-to-end product ownership in regulated, technically complex environments, defence AI platforms, national labour-market analytics, insurance SaaS, healthcare apps, and POS/forecourt systems. The common thread is translating dense, constraint-heavy requirements into precise user stories, epics, and acceptance criteria that a development team can actually ship.

The role description maps closely to what I have done at Scheidt & Bachmann, where I moved research results into production for retail and payments hardware across a matrix organisation in a full SAFe setup. Product variants, country-specific configurations, and pricing logic were core to that work. At Rohde & Schwarz I owned the backlog for a 15-person cross-functional team in Jira and Confluence, running Scrum ceremonies and keeping the roadmap aligned with senior stakeholders across a multinational programme. I know what it takes to keep a team unblocked and a roadmap credible when the underlying domain is complex.

The CPQ domain is new to me. I have not shipped configure-price-quote software specifically, and I want to be direct about that. The transferable mechanic I bring is strong: I have repeatedly decomposed multi-variant, rule-heavy physical and digital products into structured backlogs, identified requirement gaps before they became bugs, and built stakeholder alignment around a product vision. That process is the same regardless of whether the product category is CPQ, POS, or a defence data platform.

On the operational side, I have acted as Deputy IT Security Officer and managed incident response and SLA compliance in production environments. I am comfortable owning day-to-day product operation alongside the strategic work.

I would welcome a conversation about the role. My notice period is four weeks.

Best regards, *Philipp Hilbert*
