

Philipp Hilbert. *Product Manager, fintech and B2B SaaS.*

Positioning, thirteen years owning products end-to-end across fintech, insurance, and B2B SaaS, now focused on spend-management platforms where speed and trust are both product features.

Dear Qashio hiring team,

Expense management platforms live or die on trust: the finance team has to trust that the data is accurate, the card-holder has to trust that the workflow does not slow them down, and the engineering team has to trust that the product manager knows what they are asking for. Building that trust across all three layers simultaneously is the work I have spent thirteen years doing in B2B SaaS and fintech environments, and it is the reason Qashio's posting caught my attention.

At Kvitt Payment Solutions, which I co-founded and took to acquisition by Sparkasse inside the girocard ecosystem, I owned the full product lifecycle of a mobile P2P payment product from zero to handover. That experience gave me an unusually complete view of payment flows, PSP edge cases, and the compliance constraints that sit underneath any consumer-facing fintech product. More recently, at EMIL Group, a B2B SaaS platform for insurers and reinsurers, I rebuilt a delivery organisation that was losing its senior engineers and its client trust simultaneously, restructured it into three focused teams, and shipped the Claims Center from concept to production in a heavily regulated context. The mechanics there (stakeholder alignment, backlog discipline, sprint cadence, go-to-market coordination) map directly onto what your posting describes.

Your qualification list mentions accounting and expense management system familiarity as a genuine differentiator, and I want to be direct about where I stand: I have not shipped a corporate card or ERP integration product. I have, however, owned procurement workflow products at AOK ITSCare, payment architecture at Kvitt, and analytics platforms that sit downstream of financial data at Bundesagentur für Arbeit. The domain is adjacent and the gaps are learnable; the product mechanics, discovery, prioritisation, cross-functional delivery, customer representation, are fully transferable.

On the technical side: I have led engineering teams through GitOps rollouts, instrumented competing workflows to make data-driven strategy calls, and integrated Dagster and dbt pipelines to replace manual data operations. I am comfortable in Jira, in sprint ceremonies, in Confluence-based requirements documentation, and in direct customer conversations. Your expectation that the Product Manager represents Qashio face-to-face with clients is not a stretch for me, it is the part of the role I find most valuable.

I would welcome a conversation about where Qashio's product is heading and where the sharpest gaps are right now.

Best regards, *Philipp Hilbert*
