

Philipp Hilbert. *On-chain Product Manager, crypto-native.*

Positioning, ten years shipping regulated data products, eight years deep in DeFi and on-chain market infrastructure, now focused on building the best on-chain data products in the industry.

§ WHY COINMARKETCAP

CoinMarketCap is where the crypto industry looks first, from retail users checking a price to institutional desks validating liquidity. The on-chain product line is the hardest and most interesting frontier: DEX data is noisy, multi-chain, and permanently racing ahead of any data model you put in front of it. What draws me specifically is the dual challenge of both the infrastructure layer (parsing and organising on-chain data at CMC's scale) and the product layer (turning that data into something a trader using a DEX aggregator or a researcher tracking MEV can actually act on). *That exact combination of infrastructure depth and user-facing product craft is where I do my best work.*

§ AI-NATIVE STACK

Daily tools, not buzzwords.

- **Claude Code**, in-repo refactors and spec generation
- **GitHub Copilot**, pair-programming across Python and SQL
- **Cursor**, context-aware editing in larger codebases
- **Lovable**, rapid front-end prototyping
- **Framer**, design-heavy mock-ups
- **GPT**, research synthesis and edge-case generation
- **n8n**, agentic workflow automation
- **Gamma.app**, stakeholder decks and roadmap narratives

§ TECHNICAL ENVIRONMENT

Shipped with, not just listed.

Python, PostgreSQL, MongoDB, REST APIs, Kotlin (Spring Boot), Django, SQL, Kafka, Kubernetes, Docker, ArgoCD, GitOps, Jenkins, GitLab, Azure DevOps, Dagster, dbt, CI/CD, Jira, Confluence, Figma.

§ SIDE PROJECT

CRYPTO BACKTEST ENGINE [GITHUB.COM/HILBERTP](https://github.com/HilbertP) →

Personal infrastructure project: an event-driven backtesting engine for on-chain and CEX crypto strategies.

- Ingests historical OHLCV and on-chain data feeds; models slippage, price impact, and routing as first-class execution concepts rather than post-hoc adjustments.
 - Built in Python with a modular strategy interface so individual signal layers, liquidation heatmaps, funding rates, order-book depth, can be swapped in without rewriting the simulation core.
 - Developed alongside live trading on Hyperliquid, Jupiter, and Bitget, so simulated behaviour is continuously validated against real execution quality.
 - Direct relevance to CMC's on-chain roadmap: the same data problems this engine exposes, fragmented liquidity, cross-chain routing noise, MEV distortion, are the ones a world-class on-chain data product has to surface and explain.
-

§ HOW I WOULD WORK AT COINMARKETCAP

First weeks, concrete.

WEEK 1

Listen, map, find the gaps.

Sit with the data engineering team and the current on-chain pipelines to understand how DEX event data is parsed today, where the gaps are versus competing products, and which user segments (retail, quant, institutional) have the loudest unmet needs.

WEEK 2

Audit, prioritise, align.

Map competing on-chain data products feature by feature, run a quick round of qualitative interviews with heavy CMC users, and draft a first prioritised list of improvements to the data model and the product surface, aligned with engineering leads before it becomes a roadmap.

WEEK 3+

Ship, measure, iterate.

Get the first improvement in front of users, even a tightened data feed or a new on-chain metric, instrument it, close the feedback loop, and repeat. Small closed loops build trust faster than long planning cycles.

I COVER LETTER

Dear CoinMarketCap Team,

I am applying for the Senior Product Manager, On-chain role. CoinMarketCap is where the crypto industry goes to answer the question "is this real?" and the on-chain product line is now the most demanding front in that mission: DEX volumes are breaking records, multi-chain activity is fragmenting data across dozens of execution environments, and the gap between raw on-chain event data and genuinely useful product experience is still enormous. I want to close that gap.

My crypto depth is hands-on and infrastructure-oriented. I actively trade and manage assets across Hyperliquid, Bitget, Jupiter, 1inch, and Across Protocol, working with perpetual futures, spot, DEX aggregation, and cross-chain bridging as a daily practitioner. I use Coinglass and Hyblock Capital to analyse liquidation heatmaps and market microstructure, and I am building a personal backtesting engine in Python that models slippage, price impact, and routing as first-class execution variables, not simplifications. Eight years as a DeFi and crypto market participant, including L2 work at Polygon, means I arrive with a genuine user's perspective on what on-chain data products get right and, more usefully, what they consistently get wrong.

On the product side, I bring thirteen years of shipping in regulated, data-heavy environments. At Rohde & Schwarz I owned an internal AI and data platform, led a cross-functional team of fifteen-plus engineers and data scientists, and redirected strategy based on instrumented workflow analysis, identifying that a well-designed UI was recording zero usage while developer-code-first tooling drove a 200 percent increase in pipeline runs. At the Bundesagentur für Arbeit I introduced Dagster and dbt into a national labour-market analytics platform, cutting data-update time by 75 percent and enabling quarterly indicator refreshes without manual intervention. These are exactly the kinds of ETL, data modelling, and analytics platform

problems that sit under every serious on-chain data product. I know how to write clear user stories for complex data pipelines, align data engineers and business stakeholders around a single roadmap, and evaluate what I ship against agreed metrics rather than output volume.

The immediate product challenge as I read the posting is twofold: improving the in-house infrastructure that parses and organises on-chain data, and building the user-facing layer that makes that data actionable, for traders evaluating DEX liquidity, for researchers studying MEV and slippage, for developers integrating CMC data into their own tools. I have shipped in both layers. I know the difference between a data model that is technically correct and one that maps to how users actually reason about on-chain activity, and I know how to use qualitative discovery and quantitative instrumentation together to find that gap before it becomes expensive.

I would welcome the opportunity to discuss what the on-chain roadmap looks like from the inside and where the biggest open problems are. I am available at short notice and happy to work in whatever timezone suits the team.

Best regards, *Philipp Hilbert*

II CURRICULUM VITAE

§ BEARING

Product manager with thirteen years of ownership in regulated, data-intensive environments, analytics platforms, AI infrastructure, payments, and insurance, and eight years as a hands-on crypto and DeFi market participant with deep familiarity with DEX mechanics, AMMs, perpetual futures, MEV, bridges, and oracles. I turn on-chain data complexity into prioritised roadmaps, write clear user stories for data engineering teams, and close the loop between infrastructure decisions and measurable user outcomes.

§ WHAT I CAN DO

On-chain and Crypto Domain: DEX/CEX mechanics, AMMs, perpetuals, MEV, cross-chain bridging, oracles, liquidation analysis, stablecoins, custody, Hyperliquid, Jupiter, 1inch, Across Protocol, Coinglass, Hyblock Capital.

Data Platform Product Ownership: ETL (extract, transform, load), Dagster, dbt (data build tool), PostgreSQL, DuckDB, pipeline instrumentation, data modelling, KPI (key performance indicator) definition.

Product Management: continuous discovery, product vision and product roadmap, prioritisation, MVP (minimum viable product) definition, A/B testing, user research and interviews, user stories, acceptance criteria, go-to-market support.

Agile and Scaled Delivery: Scrum, Kanban, SAFe (Scaled Agile Framework), sprint planning, backlog refinement, velocity tracking, Jira, Confluence.

Technical Environments Owned: Python, PostgreSQL, MongoDB, REST APIs, Kubernetes, Docker, ArgoCD, GitOps, CI/CD, Jenkins, Dagster, dbt, Kafka.

AI Products and Tooling: LLM agents, agentic workflows, prompt engineering, Claude Code, GitHub Copilot, Cursor, Lovable, n8n.

Stakeholder and Leadership: cross-functional team leadership (15+), C-level reporting, workshop facilitation, conflict resolution, change management.

Governance: GDPR (General Data Protection Regulation), Deputy IT Security Officer, EU AI Act, budget ownership.

§ PROFESSIONAL EXPERIENCE

ROHDE & SCHWARZ · PRODUCT MANAGER · DEFENCE AI AND DATA PLATFORM 2024-2025

Led a cross-functional team of 15+ engineers and data scientists on the FCAS European programme AI and data platform; GitOps delivery with ArgoCD cut rollout from days to 30 minutes; developer-code-first strategy drove 200% increase in pipeline runs.

BUNDESAGENTUR FÜR ARBEIT · PRODUCT MANAGER · PUBLIC SECTOR ANALYTICS 2023-2024

Owned national labour-market analytics platform; introduced Dagster and dbt, cutting quarterly data-update time by 75%; migrated bare-metal infrastructure to containers; Deputy IT Security Officer.

CLINET PLATFORMS · PRODUCT OWNER · HEALTHCARE MOBILE 2023-2023

Cut overloaded roadmap to top 10% of features; user acceptance rose fivefold; integrated CGM/KIS interface, reducing digital anamnesis from 30 minutes to 5.

EMIL GROUP · PRODUCT MANAGER · INSURANCE B2B SAAS 2022-2022

Restructured 18-person delivery org into three lean teams; attrition near-zero; shipped Claims Center concept to production; cut insurance-product launch time from months to under one week.

SCHEIDT & BACHMANN · PRODUCT OWNER INTEGRATION · RETAIL
PAYMENTS 2021-2022

Moved research results to production in a full SAFe setup with agile release trains and PI planning across a matrix organisation; POS and forecourt payment systems.

BUNDESDRUCKEREI · PRODUCT OWNER (INTERIM) · GOVERNMENT DATA
2021-2021

Data structures and identity management for Robert Koch Institute programmes DIM and DESH.

AOK ITSCARE · PRODUCT OWNER (PROXY) · HEALTH INSURANCE 2019-2020

Migrated legacy procurement webshop to Shopware for three AOK insurers and roughly 20,000 employees; still in production; user stories and acceptance criteria in Jira.

ENERCON · PROJECT LEAD · WIND ENERGY IT 2019-2019

Full site IT modernisation end to end.

WALDBURG-ZEIL KLINIKEN · PRODUCT OWNER · HEALTHCARE NETWORK
2017-2018

Wifi infrastructure rollout across nine hospitals.

§ FOUNDER & EARLY-STAGE EXPERIENCE

CONSTRUCT8 · FOUNDER AND PRODUCT MANAGER · CONSTRUCTION
STAFFING 2025-2026

Zero-to-one two-sided B2B marketplace; anonymity-until-payment model; WhatsApp and Telegram as product surface; LLM agents across the funnel; funnel and conversion analysis in SQL.

QCRYPT AG · CO-FOUNDER AND PRODUCT OWNER · QUANTUM-SECURE
ENCRYPTION 2016-2021

Shipped a three-layer quantum-secure encryption product installable in under two minutes; later Chair of the board.

SMART SOIL TECHNOLOGIES · CO-FOUNDER, CDO AND CFO ·
NANOTECHNOLOGY 2018-2021

Took fertiliser product from laboratory to investor rounds; owned financial planning and investor reporting.

KVITT PAYMENT SOLUTIONS · FOUNDER AND CFO · FINTECH P2P
PAYMENTS 2013-2018

Built mobile group-based P2P payment product from zero; acquired and operated by Sparkasse inside the girocard ecosystem.
