Dear Emirates Group IT Recruitment Team,

I am writing to apply for the Technical Product Owner role within dnata Cargo. With thirteen years of backlog ownership in regulated, operations-critical domains, including a SAFe environment spanning agile release trains and PI planning, I am confident I can step into the TPO function and add immediate value to your teams in Dubai.

The role description maps closely to how I have worked across my career. At Rohde & Schwarz I owned the full backlog for an AI and data platform serving the FCAS European programme: story content, acceptance criteria, NFR prioritisation, technical debt tracking, and release gating, all coordinated across a cross-functional team of fifteen-plus engineers and data scientists running Scrum in Jira and Confluence. I introduced GitOps delivery with ArgoCD and reduced rollout time from days to thirty minutes, which also made the platform hotfix-capable, exactly the kind of non-functional improvement that is easy to defer and expensive to ignore. At Scheidt & Bachmann I worked within a fully SAFe setup with agile release trains and PI planning, moving research results into production across a matrix organisation, the closest structural parallel to the Emirates Group IT model described in the posting.

The B2B and operations-heavy context of dnata Cargo is where my background in regulated, high-throughput domains is most relevant. At EMIL Group I restructured an eighteen-person delivery organisation into three lean teams, halted attrition, and shipped the Claims Center from concept to production with no existing precedent. At the Bundesagentur für Arbeit I carried a full UI relaunch, a large ETL migration, and a containerisation programme concurrently, introducing Dagster and dbt to eliminate manual data-update overhead. Both experiences taught me that the TPO role is not just backlog hygiene: it is about protecting team capacity from noise, surfacing the right risks and dependencies early, and keeping the delivery organisation oriented around outcomes that the business can actually measure. Defining those metrics, and checking whether they moved after delivery, has been a consistent practice across every role I have held.

On the AI dimension: I work with LLM agents and agentic workflows daily, not as a curiosity but as a productivity layer that makes discovery, spec writing, and edge-case generation faster and more thorough. I have prototyped and shipped with Claude Code, GitHub Copilot, Cursor, Lovable, and n8n, and I design human-in-the-loop evaluation loops as a standard part of AI feature work. I would bring that same hands-on orientation to identifying and consolidating team-driven innovation ideas for playback to the TPM community, one of the responsibilities the posting highlights explicitly.

I am actively targeting the UAE and am fully prepared to relocate to Dubai and work on-site. I hold EU citizenship, require no visa sponsorship in Europe, and am available within four weeks of an offer. I would welcome the opportunity to discuss how my background fits the dnata Cargo TPO role and the broader Emirates Group IT product organisation.

Best regards, *Philipp Hilbert*
