

Philipp Hilbert. *Principal Product Manager, digital twin and defence platforms.*

Positioning, 13 years owning regulated-sector roadmaps across defence AI, public analytics, and healthcare, the kind of complexity Hive is built for.

Dear Analog hiring team,

Your posting for a Principal Product Manager on the Hive platform caught my attention because it names the exact challenges I have spent the last several years solving: discovery across multiple delivery teams, backlog quality as a discipline in its own right, and holding teams accountable for outcomes rather than feature counts. At Rohde & Schwarz I led the internal AI and data platform for the FCAS European defence programme, managing fifteen-plus engineers and data scientists through a cross-national Scrum setup. When user workflow analysis showed that the visually polished UI approach had generated zero real usage, I redirected the roadmap accordingly, pipeline runs increased two hundred percent. That kind of evidence-first redirection is what outcome focus actually looks like in practice.

Hive's proposition, connecting physical environments with AI and sensors for defence and government customers, maps precisely to the platform and data complexity I find most interesting. At Bundesagentur für Arbeit I owned a national labour-market analytics platform serving policymakers and researchers, acted as Deputy IT Security Officer, and carried a full ETL migration and UI relaunch simultaneously. The regulated-sector discipline that environment demands, audit trails, data provenance, security posture, is directly applicable to Analog's customer base. I understand why these customers move carefully, and I know how to build trust with them without letting caution become an excuse for slow delivery.

Backlog quality across multiple teams is a specific craft, not a side effect of good intentions. At CLINET Platforms I inherited a five-person team facing a roadmap it could not deliver. I cut it to the top ten percent of features against agreed success measures and user acceptance rose more than fivefold. At EMIL Group I restructured an eighteen-person delivery organisation into three lean teams with their own leads after near-total senior-engineer attrition, a structural backlog and team-health problem, not a planning problem, and treating it that way was what stopped the bleeding. Cross-team alignment in a multi-team programme like Hive's requires exactly that kind of diagnostic instinct alongside the facilitation skills.

On the AI-native side: I prototype with Claude Code, GitHub Copilot, and Lovable, use LLM agents in my own side projects for funnel automation and discovery synthesis, and have direct product ownership experience over AI and data pipelines including explainability and governance requirements. I understand what AI teams need from a PM to move fast without accumulating quality debt.

Abu Dhabi is a location I have actively targeted. I am an EU citizen with no visa complexity, available to relocate, and comfortable working fully on-site. I would welcome the chance to discuss how my experience maps to Hive's current programme priorities.

Best regards, *Philipp Hilbert*
