Dear Hiring Team,

Emirates NBD is building regulated infrastructure that will define how Open Finance works across the MENAT region, not a pilot, not a proof of concept, but a live capability serving nine million customers. That scale of ambition in a tightly regulated environment is precisely where I do my best work.

Over the past decade I have owned product in defence AI, public-sector analytics, healthcare, insurance, payments, and security. In each case the common thread was the same: translate a regulatory or compliance constraint into a concrete product outcome, then deliver it with an agile cross-functional team. At Bundesagentur für Arbeit I served as Deputy IT Security Officer while simultaneously leading the ETL migration and UI relaunch of a national labour-market analytics platform, balancing data governance, stakeholder expectation, and sprint cadence at the same time. At Scheidt & Bachmann I embedded inside a full SAFe release train to move payment and POS research results through to production across a matrix organisation. At CLINET Platforms I took a mobile patient app into hospital information systems under clinical data requirements. These are not adjacent experiences, they are the same job, in different regulated verticals.

The Open Finance domain specifically draws on work I began as co-founder and product owner at Qcrypt AG, where enterprise-grade security had to ship with a sub-two-minute installation path, and later at Kvitt Payment Solutions, where I took a mobile P2P payments product from zero to acquisition inside the girocard ecosystem. Consent management, identity, authentication, data exchange between principals who do not inherently trust each other, these are the product problems I find genuinely interesting, and CBUAE Open Finance is a live version of all of them.

I understand that Emirates NBD needs someone who can hold the regulatory framework in one hand and the product backlog in the other simultaneously, without losing either. I also know that Liv's user base represents both an opportunity and a constraint: the data-sharing and consent journeys have to be transparent enough for a mass-market digital bank and secure enough to satisfy prudential oversight. Designing that balance is the part of the role I am most looking forward to.

I would welcome a conversation about the Open Finance roadmap and where a product owner who has spent years at the intersection of regulation and delivery can add the most value from day one.

Best regards, *Philipp Hilbert*
