Dear Hiring Team,

I am writing to apply for the Senior Product Manager role supporting the large-scale consumer mobile application described in your posting. With 13 years of product ownership across regulated industries, including healthcare, public-sector analytics, defence AI, insurance, and fintech, I have spent my career doing exactly what this role requires: holding product vision and long-term strategy across complex, compliance-constrained environments while empowering delivery teams to execute without being bottlenecked on every decision.

Your posting describes a situation I know well: delivery capacity is in place, but the strategic product leadership seat is open. At Rohde & Schwarz I stepped into an equivalent configuration on the FCAS defence AI platform, took ownership of a cross-functional team of fifteen engineers and data scientists, redirected the product strategy based on instrumented user-workflow analysis, and increased pipeline runs by two hundred percent. At the Bundesagentur für Arbeit I did the same for a national labour-market analytics platform: I owned the product vision, drove the ETL migration, and cut the time cost of each data update by seventy-five percent while simultaneously carrying a full UI relaunch. In both cases the delivery organisations were already running; my value was in sharpening what they were building and why.

The mobile and regulated dimensions of this role are directly in my wheelhouse. At CLINET Platforms I was Product Owner for a clinical mobile patient application on iOS and Android, piloted across hospitals. Facing a roadmap the team could not deliver, I cut it to the top ten percent of features against agreed success measures: user acceptance rose more than fivefold. I also owned the integration with the CompuGroup Medical hospital information system, reducing the digital anamnesis workflow from thirty minutes to five. The experience gave me a practical appreciation for what it means to ship in a regulated environment where patient trust and data integrity are non-negotiable constraints, not afterthoughts, directly relevant to the compliance, privacy, governance, and security requirements your posting flags.

On the strategic side, I know how to translate organisational objectives into actionable multi-quarter roadmaps with measurable outcomes and Key Performance Indicators, communicate product decisions to C-level stakeholders with clarity and evidence, and align diverse groups, technology, operations, compliance, commercial, and external partners, around a shared product vision. I hold a firm view that outcome over output is not a slogan but a discipline: I agree what success looks like before we build, instrument it, and check afterwards whether it happened.

I am based in Berlin, hold EU citizenship, and am fully willing to relocate to Abu Dhabi for an on-site engagement. I am available at four weeks' notice and would welcome a conversation about how I can bring this track record to bear on your consumer mobile product.

Best regards, *Philipp Hilbert*
