

Philipp Hilbert. *Product Owner who speaks engineering, energy, and customer fluently.*

Positioning, Nearly ten years translating complex technical systems into clear product decisions – now applied to real-time energy optimisation at the intersection of AI, hardware, and the Energiewende.

§ WHY ENOPAI

EnopAI is doing the hard thing: connecting heterogeneous hardware – PV, BESS, EV chargers, CHP – through a cloud-native optimisation engine that has to work in real time, every time. The posting makes clear you need someone who can hold a technical discussion about APIs and payloads with engineers *and* sit across from a German industrial customer and hear what they are not yet saying. That is a narrow band of people. The job also mentions that you are spinning out of a proven Hörmann production environment into a broader partner network, which means the discovery and prioritisation work has real stakes attached. *That is exactly the kind of high-signal, low-bureaucracy environment where a PO who writes user stories, challenges assumptions, and ships features with engineering – rather than coordinating around them – compounds quickly.*

§ HONEST FRAMING

Direct domain experience in energy management, battery storage, or grid optimisation is not on my CV. What I do bring is a consistent track record of ramp-up in technically demanding domains – defence AI platforms, regulated InsurTech, public data infrastructure – where I went from zero context to meaningful product decisions within weeks by combining structured discovery, engineering-level conversations, and tight customer feedback loops.

§ AI-NATIVE STACK

Daily tools, not buzzwords.

- **Claude Code**, in-repo refactors and spec generation
 - **GitHub Copilot**, accelerated implementation support
 - **GPT**, discovery synthesis and requirements drafting
 - **Lovable**, rapid UI prototyping and hypothesis testing
 - **Framer**, design-heavy concept validation
 - **Gamma.app**, stakeholder workshop decks and roadmap comms
 - **n8n**, agentic workflow automation and integration prototyping
 - **Cursor / VSCode**, day-to-day development environment
-

§ TECHNICAL ENVIRONMENT

Shipped with, not just listed.

Python, Kotlin (Spring Boot), JavaScript, PostgreSQL, MongoDB, REST APIs, Kubernetes, ArgoCD, Argo Workflows, Helm, OpenShift, Docker, Jenkins, Dagster, dbt, DuckDB, Redpanda, MicroStrategy, CGM API integration, Bitbucket, Git, GitOps pipelines.

§ HOW I WOULD WORK AT ENOPAI

First weeks, concrete.

WEEK 1

Listen, map, find the gaps.

Shadow customer onboarding calls and internal refinements, map the existing backlog against what beta customers are actually requesting, and identify where requirements are under-specified or where engineering is absorbing ambiguity that should be resolved upstream.

WEEK 2

Slice and sharpen.

Run structured discovery sessions with one or two beta customers on a live pain point, translate findings into testable hypotheses, and produce a small set of well-scoped user stories with clear acceptance criteria that engineering can pull into the next sprint without clarification overhead.

Ship, measure, close.

Take ownership of a first feature end-to-end – from refined story through release – while establishing a lightweight success metric framework so we know within one sprint cycle whether the feature is moving the right needle for the customer.

I COVER LETTER

Dear EnopAI team,

The combination you are looking for – a Product Owner who can read a Postman payload, run a customer discovery interview in fluent German, and make a hard prioritisation call without hiding behind process – is not common. I have spent nearly a decade building exactly that profile across AI data platforms, InsurTech SaaS, public data infrastructure, and founder-level company building. I would like to put it to work on what you are building.

What draws me to EnopAI specifically is the operational complexity underneath the product. Optimising across PV generation, battery state, EV load, and grid constraints in real time, with heterogeneous hardware and cloud-to-cloud integrations, is a genuinely hard systems problem. That is the kind of environment where being technically fluent pays off daily – not because the PO needs to write the optimisation algorithm, but because understanding what an endpoint returns, why a payload is malformed, or what a data stream latency means for a feature's feasibility changes the quality of every decision made in refinement.

At Rohde & Schwarz, I owned a data management platform for the FCAS defence programme. The tech stack – Kubernetes, Argo Workflows, OpenShift, Redpanda – was demanding, and the stakeholder map was multinational and risk-averse. I delivered autonomous feature sets end-to-end, reduced deployment cycles from days to under forty minutes via GitOps, and unblocked an infrastructure issue the project lead had been waiting on for over a year by solving it directly in one week. At the Federal Employment Agency, I served as Deputy IT Security Officer while managing a public analytics platform migration to Kubernetes and introducing Dagster for automated ETL – which required holding both the data science and the political stakeholder relationships simultaneously. At Emil Group, I walked into a broken team, split a seventeen-person Scrum blob into functioning units, and rebuilt client trust in a prototype-stage InsurTech environment through structured weekly workshops and honest communication about what was and was not possible.

I do not have background in energy trading or battery management systems. I want to be direct about that. What I do have is a repeatable pattern: arrive in a technically complex domain, build genuine understanding fast through structured discovery and engineering collaboration, and start making useful product decisions within weeks rather than months. The energy transition

context is also not abstract to me – I understand at a system level why real-time optimisation across distributed assets matters, and I find the problem genuinely worth working on.

I am based in Berlin and explicitly open to relocating to Munich, which is where your office is. I am available to start within four weeks of an offer. I would welcome a conversation about where the product is today, what the biggest open questions are on the roadmap, and how I can contribute from day one.

Best regards, *Philipp Hilbert*

II CURRICULUM VITAE

§ BEARING

Product Manager and Product Owner with nearly ten years of experience in technically complex B2B software environments. Background spans AI data platforms, public sector analytics, InsurTech SaaS, mobile healthcare, and founder-level company building. Consistent pattern of arriving in demanding domains – defence AI, regulated insurance, public data infrastructure – building engineering-level technical understanding quickly, and delivering well-scoped features with measurable customer impact. Comfortable with ambiguity, short on ego, and oriented toward shipping rather than coordinating.

§ CORE STRENGTHS

- Translating complex technical workflows into dev-ready requirements
- Engineering-level API and systems fluency (REST, Kubernetes, data pipelines)
- Structured customer discovery and requirements engineering in German
- Backlog ownership, sprint discipline, and team restructuring
- AI-native prototyping and rapid hypothesis validation
- Cross-functional alignment across engineering, data science, and business stakeholders
- Risk-first prioritisation: customer value, technical feasibility, business viability
- Deputy IT Security Officer experience and compliance governance
- Founder-level pragmatism and high agency in ambiguous environments

§ PROFESSIONAL EXPERIENCE

ROHDE & SCHWARZ 2024, 2025

Product Manager, AI Data Transformation

- Delivered autonomous feature sets end-to-end: user stories, acceptance criteria, implementation support, testing, and GitOps-based rollout
- Reduced deployment times from several days to 20–40 minutes by introducing GitOps with ArgoCD on OpenShift
- Unblocked an infrastructure-level issue independently; delivered in one week what engineers had not shipped in over a year
- Improved data quality via filtering, tagging, reproducible transformation pipelines, and full data provenance audit trails
- Enabled ML training and evaluation on curated datasets with SafeAI and ExplainableAI transparency concepts
- Led cross-functional team: architect, data scientists, backend and frontend engineers, QA

FEDERAL EMPLOYMENT AGENCY (BUNDESAGENTUR FÜR ARBEIT) 2023, 2024

Product Manager, Public Data Analytics

- Delivered new platform features: labour shortage analytics, flexible regional comparison, modernised admin tooling
- Introduced Dagster for automated ETL and indicator generation across complex data pipelines
- Migrated legacy systems to Kubernetes; managed major system upgrades with zero service disruption
- Served as Deputy IT Security Officer with focus on compliance, governance, and data lineage
- Standardised CI/CD with full test integration at build time

EMIL GROUP 2022, 2022

Product Manager, InsurTech SaaS Platform

- Delivered Claims Center module from concept to production rollout on a B2B InsurTech platform serving primary insurers, MGAs, and brokers
- Rebuilt sprint discipline and delivery stability; split a 17-person team into focused Scrum units with clear ownership
- Reintroduced velocity tracking and structured refinement practices lost under delivery pressure

- Regained client trust in a prototype-stage environment through structured weekly product workshops
- Delivered modules across product configuration, pricing, underwriting, policy issuance, and document management

CLINET PLATFORMS 2021, 2022

Product Owner, Mobile Healthcare App

- Delivered core patient flows: digital anamnesis, meal and therapy plans, transport, chat, and document storage on iOS and Android
 - Integrated CGM interface into hospital information system (KIS) workflows
 - Managed stakeholder trust through transparent communication of legacy API and external database constraints
-

§ FOUNDER & EARLY-STAGE EXPERIENCE

QCRYPT AG 2016, 2018

Co-Founder and Product Owner

- Owned product architecture for quantum-secure encryption based on one-time-pad keys and true random number generator hardware
- Designed for non-technical end users: setup under two minutes, no prior technical knowledge required
- Served as deputy IT security officer; responsible for attack vector mitigation and compliance posture

KVITT PAYMENT SOLUTIONS 2013, 2018

Founder and CFO

- Built a group-based P2P payment product on a P2P backbone, including PSP integration, full UX/UI design, and mobile app prototype
- Product later acquired and operated by Sparkasse

AOK HEALTH INSURANCE / ITSCARE 2019, 2020

Proxy Product Owner

- Led migration of internal webshop to Shopware including complex catalogue and API integration
- Designed customisable approval policies across a multi-stakeholder procurement environment
