

Philipp Hilbert. *Senior PM built for AI-native B2B SaaS.*

Positioning, ten years translating complex workflows into scalable products, now applying that foundation inside a company where AI is the core product, not the afterthought.

§ WHY THIS COMPANY

An AI-first B2B SaaS business that puts client proximity and communication at the centre of its product motion is a rare find – most companies claim it but route feedback through four layers of abstraction before it reaches a PM. The job description explicitly names "working extremely closely with several users/clients" as the primary delivery mechanism, which matches how I have operated at every stage: weekly product workshops at Emil Group to rebuild client trust, direct stakeholder sessions at Rohde & Schwarz with multinational defence programme leads, and transparent complexity communication at CLINET to hold hospital clients through a technically constrained build. The travel expectation to the US for a company building at global scale signals real investment, not a nice-to-have. *That is exactly the environment where showing up, listening precisely, and translating fast creates the most leverage.*

§ AI-NATIVE STACK

Daily tools, not buzzwords.

- **Claude**, spec generation, edge-case discovery, cover letter and doc production
- **Claude Code**, in-repo refactors and autonomous feature delivery
- **GitHub Copilot**, daily coding assist across Python and JavaScript
- **Cursor / VSCode**, development environment with LLM-integrated workflows
- **Lovable**, rapid front-end prototyping from prompt to clickable UI
- **Framer**, design-heavy landing pages and product mock-ups

- **Gamma.app**, structured decks and stakeholder-ready documentation
 - **n8n**, multi-agent orchestration and agentic workflow automation
-

§ TECHNICAL ENVIRONMENT

Shipped with, not just listed.

Delivered production work across Python, Kotlin (Spring Boot), JavaScript, AngularJS, PostgreSQL, MongoDB, Django, dbt, Dagster, DuckDB, REST APIs, Kubernetes, ArgoCD, Argo Workflows, Helm, OpenShift, Jenkins, Bitbucket, Git, Redpanda, MicroStrategy, and low-code insurance platforms. Each of these appears in a shipped feature set or a live system rollout, not a side tutorial.

§ SIDE PROJECT

DEV AGENT FRAMEWORK [GITHUB.COM/HILBERTP](https://github.com/HilbertP) →

Building a personal autonomous agent framework for crypto market analysis and algorithmic execution.

- Designs file-queue-based agent loops for backtesting crypto strategies against historical market data.
 - Combines Python-based orchestration with LLM-assisted decision layers for execution signal generation.
 - Integrates with live venues including Hyperliquid, Bitget, Jupiter, and cross-chain bridging via Across Protocol.
 - Demonstrates the same autonomous feature delivery and systems-thinking applied daily in professional PM work.
-

§ HOW I WOULD WORK AT THIS COMPANY

First weeks, concrete.

WEEK 1

Listen, map, find the gaps.

Shadow client-facing sessions, read every support ticket and feature request in the backlog, and build a first-pass map of where the product is losing users relative to what the job description calls "constantly improving each time they use it."

WEEK 2

Slice, validate, sequence.

Pick the two or three highest-signal gaps, write crisp problem statements with acceptance criteria, and run a short discovery call with one or two clients to pressure-test the framing before any engineering capacity is committed.

WEEK 3+

Ship, close loops.

Move the first slice through refinement and into sprint, establish a lightweight feedback cadence with the clients closest to that problem, and begin building the rhythms – weekly workshops, async update notes, clear decision logs – that keep trust compounding.

I COVER LETTER

I am applying for the Senior Product Manager role at your company because the description maps almost exactly onto the mode of product work I have spent ten years refining: B2B SaaS, close client proximity, AI as the operating environment rather than the subject of a roadmap item, and communication as the load-bearing skill.

At Emil Group I joined an InsurTech SaaS platform mid-crisis. A 17-person team had lost delivery rhythm, client trust was eroding, and the team was on the verge of losing its most senior engineers. I split the team into smaller Scrum units, reintroduced velocity tracking and structured refinement, and ran weekly product workshops with clients directly. Senior developer attrition dropped from near-total to a single departure. The platform – which had been collapsing under its own weight – stabilised and began shipping again. That work was almost entirely about communication and product clarity under pressure, which is precisely what the role description leads with.

At Rohde & Schwarz I ran the product for a central AI and data management platform inside the European defence programme FCAS. The environment was technically complex – multimodal datasets, Kubernetes orchestration, GitOps pipelines, a multinational stakeholder structure – and the mandate was to make AI training data trustworthy and auditable. I delivered autonomous feature sets end-to-end, reduced deployment times from several days to under 40 minutes by introducing ArgoCD-based GitOps, and unblocked an infrastructure problem the project lead had been requesting from engineers for over a year. I solved it in one week. That is what AI-native product execution looks like in practice: not prompting a model to write a spec, but understanding the full stack well enough to close the loop yourself.

I have been using AI tooling daily for several years now – Claude Code for in-repo refactors, GitHub Copilot for development, n8n for multi-agent workflow automation, Lovable for rapid

prototyping, Framer for design work. These are not tools I list; they are the environment I operate in. A company that describes an AI environment as "normal" is describing my default setting, not a stretch goal.

The travel requirement to the US and company-wide events is not a constraint for me. I have worked across multinational programmes and with distributed client bases. Showing up in person, building trust in the room, and then maintaining it remotely is a workflow I know well. I am an EU citizen, fluent in English at C2, and available within four weeks of an offer.

I would welcome a call to discuss the product challenges your clients are facing and where my background fits most directly.

Best regards, *Philipp Hilbert*

II CURRICULUM VITAE

§ BEARING

Senior Product Manager with nearly ten years of experience across AI data platforms, B2B SaaS, regulated industries, and founder-level company building. Proven track record of stabilising delivery in prototype-stage environments, rebuilding client trust through structured communication, and shipping autonomous feature sets end-to-end. Fluent in AI-native workflows and comfortable operating where requirements are incomplete, priorities shift, and teams need someone to bring clarity fast. Combines deep technical fluency with a commercial instinct for prioritisation and stakeholder alignment.

§ CORE STRENGTHS

- B2B SaaS product delivery across complex, regulated environments
- Client proximity and structured communication under delivery pressure
- AI-native product execution and autonomous feature delivery
- Backlog management, sprint discipline, and team restructuring
- Cross-functional alignment across engineering, QA, data science, and compliance
- Rapid prototyping and LLM-assisted requirements generation
- Product discovery under ambiguity and incomplete requirements
- Commercial awareness and KPI-oriented prioritisation
- Founder-level pragmatism: low ego, high agency, full ownership

§ PROFESSIONAL EXPERIENCE

ROHDE & SCHWARZ 2024, 2025

Product Manager, AI Data Transformation

- Delivered autonomous feature sets end-to-end: user stories, acceptance criteria, implementation support, testing, and GitOps-based rollout
- Reduced deployment times from several days to 20–40 minutes by introducing GitOps with ArgoCD
- Improved AI training data quality through filtering, tagging, reproducible transformation pipelines, and full data provenance audit trails
- Unblocked an infrastructure-level problem in OpenShift that had been outstanding for over a year; delivered the solution in one week
- Led a cross-functional team of architect, data scientists, backend and frontend engineers, and QA across a multinational stakeholder structure
- Enabled ML training and evaluation on curated datasets with transparent evaluation concepts (SafeAI, ExplainableAI)

FEDERAL EMPLOYMENT AGENCY (BUNDESAGENTUR FÜR ARBEIT) 2023, 2024

Product Manager, Public Data Analytics

- Delivered new features including labour shortage analytics, flexible regional comparison, and modernised admin tooling for a live public-facing analytics platform
- Introduced Dagster for automated ETL and indicator generation, improving data reliability and reducing manual pipeline work
- Served as Deputy IT Security Officer with focus on compliance, governance, and data lineage
- Migrated legacy systems to Kubernetes and standardised CI/CD with full test integration at build time

EMIL GROUP 2022, 2022

Product Manager, InsurTech SaaS Platform

- Rebuilt client trust in a prototype-stage environment through structured communication and weekly product workshops – the primary mechanism the role description names
- Split a bloated 17-person team into smaller, effective Scrum units; reintroduced velocity tracking and structured refinement practices
- Reduced senior developer attrition from near-total to a single departure
- Designed and delivered a Claims Center module from concept to production rollout

- Delivered modules across product configuration, pricing, underwriting, policy issuance, document management, and workflow automation

CLINET PLATFORMS 2021, 2022

Product Owner, Mobile Healthcare App

- Delivered core patient flows – digital anamnesis, meal and therapy plans, transport, chat, and document storage – on iOS and Android under tight deadlines
 - Managed stakeholder expectations through transparent communication of technical constraints (legacy APIs, external databases), maintaining trust across a complex hospital integration
 - Integrated CGM interface into hospital information system workflows
-

§ FOUNDER & EARLY-STAGE EXPERIENCE

QCRYPT AG 2016, 2018

Product Owner

- Owned product architecture for a quantum-secure encryption product based on one-time-pad keys and true random number generator hardware
- USP: setup under two minutes, no technical knowledge required – a direct exercise in product clarity for a non-technical B2B audience
- Served as deputy IT security officer

KVITT PAYMENT SOLUTIONS 2013, 2018

Founder & CFO

- Founded a group-based P2P payments product; handled PSP integration, full UX/UI design, and mobile app prototype
 - Later acquired and operated by Sparkasse
-
