Dear Dubai Holding team,

I am applying for the Senior Manager - AI Product Management role. I have 13 years of product ownership in regulated, complex organisations, defence AI, public-sector analytics, insurance, healthcare, and payments, and the through-line across all of it is the same thing your posting describes: getting AI and data products to produce evidenced, sustained business value rather than promising it.

At Rohde & Schwarz I owned the internal AI and data platform for the FCAS European programme, managing a cross-functional team of 15 engineers and data scientists. The most useful decision I made there was not a feature decision: I instrumented two competing workflows and found that the polished UI-led design recorded exactly zero clicks, while the developer-code-first path recorded all the usage. Redirecting strategy based on that evidence increased pipeline runs by 200%. That is the kind of commercial and product judgement your posting is asking for.

At the Federal Employment Agency I owned a national labour-market analytics platform, acting also as Deputy IT Security Officer. I ran a full ETL migration, moved a bare-metal system into containers, and cut the time per quarterly data update by 75% through Dagster and dbt automation. Each of those was a workflow redesign, not a feature addition, and each required business stakeholders, engineers, and compliance functions to move together.

Earlier I co-founded Kvitt Payment Solutions, a mobile P2P payments product taken from zero to acquisition by Sparkasse inside the girocard ecosystem, and Qcrypt AG, a quantum-secure encryption startup where I owned the product architecture and chaired the board. Building business cases, validating benefit with finance, and managing governance obligations in regulated environments are not new territory for me.

Your portfolio spans ten sectors including logistics, real estate, and ICT, and the posting is clear that the bar is evidenced value rather than asserted value. That is the only bar I know how to work to. I would be glad to speak with you about how I would approach the portfolio.

Best regards, *Philipp Hilbert*
