Dear Crypto.com team,

I am applying for the Senior/Principal Product Manager role for User Onboarding and Growth. I have spent 13 years shipping products in regulated industries, including fintech, insurance, healthcare, and defence AI. The common thread across those roles is owning the full chain from compliance constraint to user-facing outcome, not just the roadmap.

On the regulated side: at Bundesdruckerei I handled identity management for government platforms, and at Kvitt Payment Solutions I built a P2P fintech product from zero through to acquisition inside the girocard ecosystem at Sparkasse. I know what it means when a regulatory change breaks a funnel, and I know how to re-plan without stalling a team. KYC and account opening are not a black box to me; they are a design constraint I have worked around in practice.

On the growth side: at CLINET Platforms I cut a roadmap that a five-person team could not deliver down to the top 10% of features against agreed success measures. User acceptance rose more than fivefold. At Rohde and Schwarz I instrumented two competing workflows to find that the heavily designed UI path recorded zero clicks, and redirected the product strategy accordingly, which increased pipeline runs by 200%. I do not wait for someone else to hand me the analysis.

My crypto engagement goes beyond domain knowledge. I actively trade across Hyperliquid, Bitget, Jupiter, 1inch and Across Protocol, work with perpetuals, DEX aggregation, cross-chain bridging, and have been building a backtesting engine and algorithmic trading framework on the side. I care about the infrastructure layer: stablecoins, custody, exchange connectivity, and the mechanics that make digital-asset markets function at scale. That means I can hold the trading product conversation with the Trading team from day one, not after a ramp period.

The Crypto.com onboarding platform sits at an interesting pressure point: one platform must serve a growing number of products, regulatory paths, and trading journeys without fragmenting. I have extended shared platforms across products before, at EMIL Group across insurer, broker, and underwriter contexts, and at Scheidt and Bachmann across a retail and payments matrix. I know the traps: one-off integrations that look fast and cost months to maintain, and journey branches that diverge until the platform is no longer shared in any meaningful sense.

Best regards, *Philipp Hilbert*
