

Philipp Hilbert. *Product Lead building FinOS end-to-end.*

Positioning, 13 years owning product in regulated, complex domains, now focused on the single platform that replaces fragmented SME finance.

Dear Finanzshels team,

I am applying for the Product Lead role. My background is 13 years of product ownership in regulated, operationally complex environments, insurance, public-sector analytics, defence AI, and fintech. I have spent most of that time in exactly the situation you describe: a product that exists as a collection of manual steps and disconnected systems, and a mandate to replace it with something coherent.

At EMIL Group I joined an 18-person delivery organisation that had lost the confidence of its senior engineers and its clients. I restructured it into three focused teams, shipped the Claims Center from concept to production, and cut the time to launch a new insurance product from months to under a week. At Bundesagentur für Arbeit I introduced Dagster and dbt into a national labour-market data platform, reducing the time per quarterly data update by 75% and removing the manual hand-holding that had been blocking the team. Both of those are versions of the same problem you are hiring to fix: human effort absorbing what the product should do.

I have shipped AI-powered features in production and understand what it takes to do it responsibly, evaluation loops, human-in-the-loop checkpoints, audit trails, guardrails. At Rohde & Schwarz I owned the internal AI and data platform for the FCAS European programme, managing 15 engineers and data scientists through Scrum. I also build with AI myself daily: Claude Code, Copilot, Cursor, and Lovable are in my regular workflow, and I use n8n for agentic automation. I co-founded Kvitt Payment Solutions, a fintech P2P payments product that was acquired by Sparkasse and operated inside the girocard ecosystem, so the financial services domain is not new to me.

The charter you are describing, mapping and rebuilding the customer journey across accounting, taxation, and bookkeeping on FinOS, establishing product standards for an AI-native team, and owning prioritisation and sequencing from the ground up, is the kind of role I have been looking for. I am based in Berlin, willing to relocate to Dubai, and available at short notice.

I would be glad to walk through a concrete before-and-after journey map in a conversation.

Best regards, *Philipp Hilbert*
