Dear Hiring Team at Akkodis,

I am applying for the Product Owner / Scrum Master role. With 13 years of product ownership in regulated and complex enterprise environments, I have spent the majority of my career doing exactly what this role describes: sitting between business stakeholders and engineering teams, translating operational requirements into structured user stories and acceptance criteria, facilitating the full Scrum ceremony cycle, and maintaining roadmap visibility across dependencies and risks.

Two recent engagements are directly relevant. At Rohde & Schwarz, I owned a multinational defence AI data platform as part of the FCAS European programme, a programme defined by cross-functional complexity, strict acceptance criteria, and the need to coordinate across architects, data scientists and engineers who rarely agreed on priorities. I introduced GitOps delivery with ArgoCD, which compressed rollout time from days to thirty minutes and made the platform hotfix-capable. That was a product backlog and delivery problem before it was a technical one, and solving it required exactly the kind of structured sprint discipline and stakeholder alignment this role calls for. At the Bundesagentur für Arbeit, I ran a national labour-market analytics platform, integrated test automation into the Jenkins pipeline, introduced Dagster and dbt for repeatable data imports, and carried a full UI relaunch through a live production system. Both roles combined real-time data workflows with operational approval processes, the domain your preferred experience section specifically names.

Earlier, at EMIL Group, I restructured an 18-person delivery organisation into three lean teams with dedicated leads when the existing structure was losing engineers and client trust simultaneously. At CLINET Platforms, I took a three-person mobile health team whose roadmap was undeliverable and cut it to the top ten percent of features, user acceptance rose more than fivefold as a result. Both situations required the same discipline: protect the team's focus, keep business stakeholders informed, and make the sprint a unit that actually delivers rather than a calendar event.

I am currently based in Berlin, hold EU citizenship with no visa requirement, and am available within four weeks. I am actively open to relocating to the UAE and would welcome an on-site role in Dubai or Abu Dhabi as a positive fit. My English is C2, I have presented Qcrypt AG's quantum-encryption product to international investors in English, and a public video sample is available at youtube.com/watch?v=nt06f71lgfE.

I would be glad to speak with you about how my background maps to the specific platform and team you are building.

Best regards, *Philipp Hilbert*
