

Philipp Hilbert. *Product Owner for AI-native trading platforms.*

Positioning. Thirteen years of regulated-industry product ownership, hands-on AI tooling, and a fintech founding track, shipped into a platform where every second counts.

Dear ThinkMarkets Hiring Team,

I am applying for the Product Owner role. I have spent thirteen years owning product backlogs and roadmaps in regulated environments, defence AI, public-sector analytics, insurance, healthcare, fintech, and a payments startup I took from zero to acquisition inside the girocard ecosystem. Throughout that time the common thread has been translating complex technical and business constraints into requirements that engineering teams can actually act on, and doing it fast enough to keep delivery moving.

What draws me specifically to ThinkMarkets is the explicit mandate to leverage AI tools, Claude and Claude Code are named directly in the posting, for product discovery, requirements drafting, and documentation. This is not a future-state ambition for me; it is my current workflow. I use Claude Code to draft and iterate on user stories, generate acceptance criteria edge cases, and prototype requirements documents before a single meeting is booked. I use Lovable and Framer for rapid front-end prototyping to validate ideas cheaply before committing engineering capacity. The result is faster, better-defined backlog items and fewer surprises in sprint review.

My fintech background is directly applicable. I co-founded Kvitt Payment Solutions, a mobile P2P payments product that was acquired by Sparkasse and operated inside the girocard ecosystem. I understand payment flows, PSP integration, and the compliance and security constraints that shape what you can ship in a regulated financial environment. I also actively trade across centralised and decentralised venues, Hyperliquid, Bitget, Jupiter, 1inch, and I have built my own backtesting engine and trading bots. I know what traders need from a multi-asset platform from the inside, not from a user-research deck.

On the delivery side, I have worked across Scrum, Kanban, and SAFe environments. At Rohde & Schwarz I introduced GitOps delivery with ArgoCD across a multinational team, cutting rollout time from days to 30 minutes and making the platform hotfix-capable. At CLINET Platforms I halved a roadmap that a three-person team could not deliver and watched user acceptance rise fivefold. At EMIL Group I restructured an 18-person delivery organisation into three lean teams, cut near-total attrition to a single departure, and shipped the Claims Center from concept to production. Strong stakeholder management and JIRA-based backlog discipline were the operating system in all three.

I am confident I can step into the Product Owner role at ThinkMarkets, own the backlog from day one, and bring a working AI-native toolkit that accelerates requirements, discovery, and documentation across the ThinkTrader platform. I would welcome a conversation.

Best regards, *Philipp Hilbert*
