Dear Readdle team,

PDF Expert has 30 million users, App of the Year recognition, and a product that people rely on every day. That is the kind of foundation that makes a PM role interesting, there is real signal in the data, real stakes in every decision, and real room to push the product forward rather than just maintaining it.

I have 13 years of product ownership, most of it in environments where the stakes were high and the complexity was structural: a European defence AI programme with multinational engineering teams, a national labour-market analytics platform, a B2B SaaS insurance platform, and a fintech product taken from zero to acquisition by Sparkasse. Across those roles I owned discovery, roadmap prioritisation, cross-functional alignment, and delivery, the full loop the posting describes.

The AI prototyping angle in this role is a fit, not a talking point. I use Claude Code, Lovable, Cursor, and GitHub Copilot in my daily workflow, for rapid prototyping, spec generation, and edge-case validation. At Rohde & Schwarz I redirected the entire product strategy based on instrumented workflow data: a polished UI recorded zero clicks while the developer-code-first path drove a 200% increase in pipeline runs. That kind of outcome-first thinking, backed by data and a willingness to kill a beautiful thing that doesn't work, is how I approach every product decision.

The posting mentions mobile UX and cross-platform product lifecycle across iOS, Mac, and Web. I have shipped on mobile (patient app on iOS and Android at CLINET Platforms) and managed multi-platform rollout in SAFe environments. I am comfortable with the full product lifecycle from discovery and sizing through execution, launch, and post-launch monitoring.

I would like to bring that combination of analytical rigour, hands-on AI tooling, and cross-functional delivery experience to the PDF Expert team.

Best regards, *Philipp Hilbert*
