Dear Autodesk team,

I am applying for the Principal Product Manager role in the Forma Administration organization. The posting describes something I find interesting: building the platform layer that connects hundreds of companies across the AEC lifecycle, specifically the admin persona who configures workspaces, manages business units, and opens up integration points for the whole ecosystem.

My most relevant experience is at EMIL Group, where I owned a B2B SaaS platform used by insurers, reinsurers, and brokers. The admin and configuration surface was central to the product, each client needed different settings, custom properties, and user management. I restructured the delivery organization, shipped the Claims Center from concept to production, and cut new product launch time from months to under a week. At Rohde & Schwarz I led an API-first data platform for the FCAS programme, managed a cross-functional team of 15+ engineers and data scientists, and redirected strategy based on instrumented workflow analysis, the UI-led approach had zero clicks, so we switched to developer-code-first and pipeline runs went up 200%.

The API-first angle in this posting matters to me. I have shipped REST APIs as primary product surfaces, written interface contracts before engineering starts, and worked directly with platform consumers, both internal teams and external integrators. Regionalization and compliance work is familiar from my time at the Federal Employment Agency, where we ran ETL migrations, containerized environments, and a full UI relaunch while also maintaining Deputy IT Security Officer responsibilities.

I use Figma daily and prototype with Lovable and Claude Code. When I need to communicate a complex workflow or API contract to a non-technical stakeholder, I do not write a document, I build something they can click through.

I would welcome the chance to talk about the workspace setup experience and the public API roadmap in more detail.

Best regards, *Philipp Hilbert*
