

Philipp Hilbert. *Lead product manager, customer-facing platform growth.*

Positioning. I have spent 13 years turning product strategy into shipped outcomes in regulated B2B environments, and I want to do that for Veriff's Customer Portal.

Dear Veriff team,

Veriff's Customer Portal is being asked to do two things at once: let customers operate the product day to day, and act as the commercial surface where they discover, expand, and grow. Those two purposes pull in different directions, and the PM role that holds them together is a hard one. I have spent 13 years in exactly that kind of tension, regulated B2B environments where the product has to earn trust and drive revenue at the same time.

At Rohde & Schwarz I owned an AI and data platform for the FCAS European programme, running continuous discovery across multinational engineering teams and redirecting product strategy when the data said the original direction was wrong. Pipeline runs went up 200% after I instrumented competing workflows and found that the visually polished UI-led path recorded exactly zero clicks. At the Bundesagentur für Arbeit I owned a national labour-market analytics platform as sole PM, managed a full ETL migration, and cut data-update time by close to 75% by introducing Dagster and dbt. Both roles required ruthless prioritisation in environments with more good ideas than capacity, and both required building credibility with engineering and data science partners who did not report to me.

The commercial dimension of this role is one I take seriously. At Kvitt Payment Solutions, a mobile P2P payments product I co-founded, we grew from zero to acquisition by Sparkasse inside the girocard ecosystem. I understand that what gets built has to map to how the business grows, in Veriff's case, that means the Customer Portal's roadmap needs to be tied explicitly to acquisition, upsell, retention, and the revenue signals that come from enterprise customers trusting what they see. The shift from Station as a self-serve growth surface to a window into Veriff's accuracy and fraud advantage is a strategic bet I find compelling, and one where discovery with demanding enterprise accounts is the core discipline.

I work AI-natively: Claude Code, GitHub Copilot, Cursor, Lovable, and n8n are part of how I run discovery and delivery today, not credentials I list. I am also building a two-sided marketplace solo right now, which keeps my zero-to-one instincts sharp alongside the enterprise-scale PM work in my background.

The role is designed to start as an IC and grow into team leadership. That is the right order. Authority earned through the quality of thinking, not a title, I agree with how Veriff frames it.

Best regards, *Philipp Hilbert*
