Dear Monks team,

I am applying for the Senior Product Manager role. I have 13 years of product ownership across defence AI, public-sector analytics, insurance SaaS, healthcare, payments, and fintech, always in environments where I had to earn client trust while also keeping a distributed engineering team pointed at the right problem.

The work at Monks is a direct match for how I operate. At EMIL Group I joined a struggling 18-person delivery organisation, restructured it into three lean teams with their own leads, rebuilt client confidence, and shipped the Claims Center from concept to production. At Bundesagentur für Arbeit I owned a national labour-market analytics platform, introduced Dagster and dbt to cut data-update time by around 75%, and served concurrently as Deputy IT Security Officer. At Rohde & Schwarz I led a cross-functional team of 15+ engineers and data scientists building the internal AI and data platform for the FCAS European defence programme, and cut rollout time from days to 30 minutes by championing GitOps with ArgoCD. Each of these involved exactly what the role description names: continuous discovery, backlog ownership, KPI definition, and stakeholder alignment across engineering, design, and delivery, in a globally distributed Scrum setup tracked in Jira.

I work with AI tooling daily, Claude Code, GitHub Copilot, Cursor, Lovable, and n8n for agentic workflows, so the Monks.Flow AI ecosystem for marketing orchestration is a product space I can engage with technically, not just conceptually. I can prototype, write user stories with precise acceptance criteria, and have a credible conversation with the engineers building it.

On the consulting side: I have worked as an embedded product lead for clients rather than internal product teams for most of my career. I know what it takes to show up, understand a client's business fast, make product decisions the client trusts, and hand off something that keeps running after the engagement ends.

I would be glad to talk through any of this in more detail.

Best regards, *Philipp Hilbert*
