

Philipp Hilbert. *Platform product manager for content infrastructure at scale.*

Positioning, I have 13 years shipping platform and data products in regulated, multi-stakeholder environments, and I am ready to do the same for Sanoma Learning's Content as a Service layer.

Dear Sanoma Learning team,

I am applying for the Product Manager role on your Content as a Service platform. I have 13 years of experience owning platform and data products in complex, multi-stakeholder environments, and the work Sanoma Learning is doing, building a shared content infrastructure that lets downstream teams across 12 countries ship faster, is exactly the kind of product problem I want to work on next.

At the Bundesagentur für Arbeit I owned the national labour-market analytics platform from end to end. I introduced Dagster and dbt to replace a fragile manual import process: quarterly data updates that previously required hand-holding now ran without intervention, cutting update time by roughly 75%. I also drove a full ETL migration and a UI relaunch while simultaneously migrating the system from bare-metal to containers. That combination of pipeline ownership, metadata discipline, and release planning across competing workstreams is close to what the CaaS role describes.

At Rohde & Schwarz I owned the internal AI and data platform for the FCAS European programme, working with 15+ engineers and data scientists across multinational teams. I championed GitOps delivery with ArgoCD, which cut rollout time from days to 30 minutes and made the platform hotfix-capable. I also redirected the product strategy based on workflow instrumentation: the UI-led approach recorded zero clicks, and the developer-code-first alternative drove a 200% increase in pipeline runs. That kind of data-informed decision-making is something I apply to every prioritisation call.

Across those roles and my own ventures, including co-founding Qcrypt AG and building the construct8 marketplace, I have worked with content models, APIs, ETL pipelines, semantic enrichment, and cross-functional teams that include engineering, data science, legal, and commercial stakeholders. I am familiar with LLM-assisted content enrichment and I actively work with agentic workflows in my own projects. The AI and metadata enrichment angle in the CaaS roadmap is an area I can contribute to immediately, not just support from the sidelines.

I work well in matrix organisations. My default is to get the relevant people in a room, make the trade-offs visible, and reach a decision rather than escalating. I am based in Berlin, hold German citizenship, and am available within four weeks.

I would be glad to talk through how my experience maps to the CaaS roadmap.

Best regards, *Philipp Hilbert*
