PROFILE

Product Manager and Product Owner with 13 years of product ownership across platform, data, and API-driven products in regulated industries. I define product vision and roadmaps, lead cross-functional teams through agile delivery, and own end-to-end releases from discovery through post-launch optimisation. I have shipped data pipelines, ETL migrations, AI platform capabilities, and B2B SaaS products in matrix organisations where engineering, data science, legal, and commercial teams all have a seat at the table.

HOW I WORK

- I leave my ego at home. I want to drive the decision, not to have the last word.
- On a new product I spend a little to learn before spending a lot to build. Cheap experiments make expensive decisions safe(r).
- Outcome over output. Producing something is not the achievement; it also has to fit a market, so I agree what would count as success before we build and check afterwards whether it happened.
- I keep the whole value chain in view, not just the backlog. Defect-to-fix time is a product metric; architects and DevOps engineers build that chain, my job is to steer it into the right lanes.
