

Philipp Hilbert. *Senior Product Manager, customer data platforms.*

Positioning, I help enterprise SaaS teams turn complex data infrastructure into products that customers actually adopt.

Dear Tealium team,

I am applying for the Sr. Product Manager role on the Enterprise Product Team. Tealium's positioning as the data foundation for enterprise AI strategies is the specific kind of platform problem I want to work on next. Providing clean, consented, and actionable data so that machine learning and personalisation actually work at scale is a harder product challenge than most companies admit, and the job description shows you understand that.

My background fits the role directly. I have 13 years of product ownership across regulated industries, with the last several years spent on data platform products and SaaS infrastructure. At Bundesagentur für Arbeit, I owned a national labour-market analytics platform, drove the full migration from bare-metal to containerised environments, and introduced Dagster and dbt to replace fragile manual ETL runs. That cut data-update time by roughly 75% and gave the team autonomous control over its own environments. At Rohde & Schwarz, I led the internal AI and data platform for the FCAS European defence programme, managed a cross-functional team of 15 engineers and data scientists, and redirected the product strategy based on instrumented workflow analysis, increasing pipeline runs by 200% by deprioritising a UI that nobody used. Those are the kinds of upstream and downstream dependency problems Tealium's enterprise products sit inside.

I work in a fully AI-native way. I use Claude Code, GitHub Copilot, Cursor, Lovable, and n8n for agentic workflows daily, not as credentials but as how I actually run discovery, prototyping, and spec generation. I also have hands-on experience with user story writing, backlog management, and agile delivery across Scrum, Kanban, and SAFe. I have shipped features from concept to production in B2B SaaS insurance at EMIL Group, in healthcare at CLINET Platforms, and in payment infrastructure through Kvitt Payment Solutions, which was acquired into the Sparkasse girocard ecosystem.

On cross-functional collaboration: at EMIL Group I inherited an 18-person delivery organisation losing its senior engineers and its client trust. I restructured it into three lean teams with their own leads, attrition dropped to a single departure, and client relationships recovered. That kind of stakeholder alignment, across engineering, sales, customer success, and leadership, is what the role description asks for, and I have done it in environments more turbulent than most.

I would welcome the chance to speak about the Enterprise Product Team's current roadmap and where I could add the most value quickly.

Best regards, *Philipp Hilbert*
